1 feed at $95 \mathrm{c}, \mathrm{N}$. 2 feed at 92 c , and sample oats at $891 / 2 \mathrm{c}$ per bushels ex-store, which prices are compared with a week ago show an advance of $1 / 2 \mathrm{c}$ per bushel. Trade in American corn was also fairly active, but showed no change, sales of car lots of No. 3 yellow belng made at $\$ 1.88$, No. 4 yellow at $\$ 1.78$, and sample grades of corn at $\$ 1.40$ to $\$ 1.73$ per bushel exstore. There was also an improved demand for Manitoba barley and sales of some fair-sized lots were made on spot, including one lot of 60,000 bushels of sample barley at $\$ 1.30$ per bushel ex-store, and car lots of the same grade have sold at $\$ 1.35$ to $\$ 1.40$. Fluctuations in grain on Saturday at Winnipeg were:

U. S. CROPS.

Washington, August 8 LOSS of $171,000,000$ bushels of corn and $13,000,000$ bushels of wheat from the prospective production of this year's important food crops, as indicated a month ago, was shown to-day in the Department of Agriculture's
August
Corn and wheat are bumper crops this year despite adverse weather conditions, which have curtalled somewhat the heavy production indicated earlier in the growing season. In June a crop of $931,000,000$ bushels of wheat was forecast, but in July it was estimated to have lost $40,000,000$ bushels and the prospective yield was placed at $891,000,000$ bushels. That is $241,000,000$ bushels more than produced last year, and ts $82,000,000$ bushels more than the average wheat crop for the five years 1912-16.
The first estimate of the great corn crop, issued last month was $3,159,000$ bushels, and it was feared the July weather conditions were such as to have caused damage to the crop. A crop of that size would be a record one, but only about 500,000 bushels more than ast year's record-breaking crop. The average corn crop during the first years 1912,16 was $1,761,000,000$ bushels.
