THE D. A. JONES CO. Ltd., Boston,

The season for lice is now at hand. Watch your sitting hens closely, and also the nests and perches of your poultry-houses.

Red pepper may be fed to poultry in moderate quantities with good results, but do not make their food so strong with it that you could not swallow it yourself.

Perches should not be used for chicks of the heavier breeds, as there is a tendency to deformity if the chicks roost on perches while the breastbone is still in an almost cartilaginous state.

Eggs during the early part of incubation are quickly chilled and spoiled; after the sixteenth day do not give up the eggs, though the hen may have been absent from them twenty-four hours. This applies, of course, to late spring and summer.

Really meritorious fowls will never go a-begging for purchasers. Water finds its level no more surely than well-bred stock will command its value in gold. Good fowls—to use a homely phrase—sell themselves. It is those of mediocre and low standard that tax the ingenuity of the salesman.
