

(2) shows that the first stage of the production process is the manufacture of raw materials by the mining industry. This stage involves the extraction of minerals from the ground, followed by processing and refinement to produce various forms of raw materials. The second stage, which follows immediately after the first, is the manufacture of intermediate goods. These goods are produced by various industries, such as steel mills, chemical plants, and food processing facilities. The third stage, which follows the second, is the manufacture of final products. These products are produced by various industries, such as automobile manufacturers, clothing manufacturers, and pharmaceutical companies.

(3) The first stage of the production process is the mining industry, followed by the manufacture of intermediate goods, and finally the manufacture of final products.

(4) The mining industry is the primary source of raw materials for the production process. The mining industry provides the basic materials needed for the production of intermediate goods, such as coal, oil, and natural gas. The mining industry also provides the basic materials needed for the production of final products, such as steel, aluminum, and plastic. The mining industry is the primary source of raw materials for the production process.

(5) The mining industry is the primary source of raw materials for the production process.

(6) The mining industry is the primary source of raw materials for the production process.

(7) The mining industry is the primary source of raw materials for the production process.

(8) The mining industry is the primary source of raw materials for the production process.

(9) The mining industry is the primary source of raw materials for the production process.

(10) The mining industry is the primary source of raw materials for the production process.

(11) The mining industry is the primary source of raw materials for the production process.

(12) The mining industry is the primary source of raw materials for the production process.

(13) The mining industry is the primary source of raw materials for the production process.
