CARE OF TREES AFTER WINTER INJURY

(Experimental Farm Note)

Last winter will long be remembered by fruit growers in the Province of Ontario and Quebec as one of the hardest on fruit trees of any that has been experienced.

While peach trees were killed back to some extent in Niagara Peninsula, it was among the apple trees and in the colder districts where the greatest losses occurred.

The forms the winter injury took were root killing, splitting of the bark at the base of the tree, sometimes known as "collar rot," bark splitting on the trunk, trunk killing, crotch injury and killing back of the top. The fruit and leaf buds on the trees were often killed also. While a large number of trees died during 1918, there were many more which went into this winter in a very weakened condition and may yet die. By the time pruning is begun it should be possible to tell any trees which are going to die this winter or which have additional dead wood on them, and it will be possible to prune them intelligently. There will be many cases of crotch injury, however, where almost all of the bark and cambium were killed around the base of large limbs and where the latter meet in the head of the tree. Trees injured in this way are very unsatisfactory as they may linger for years in a weakened condition and of little value and eventually will break down if they do not die before doing so. The orchard should be gone over carefully this winter and examined for such injury. When pruning the orchard, the dead bark should be removed from these patches, and the wounds painted and kept painted with white lead paint. If much of the bark and cambium in the main crotches are dead, the future of the tree should be considered as very doubtful. If many of the trees in the orchard are affected in this way and the trees are wide enough apart to permit of planting a young tree half way between, without too much shading from the older trees, it would be well to plan to do this next spring. Good crops may be obtained from these injured trees for some years, and in the meantime, the young trees will be coming into bearing. Where land is available, however, the setting of an orchard elsewhere is desirable. Other trees may be planted successfully where trees were killed last winter although it has been said that young trees will not do well where an older tree has been. Sometimes they do not, but it is usually due to the fact that the older trees that were left over shadowed them. Where they have sufficient light they should succeed.

When re-planting where another tree has been, fill the hole with good surface soil from midway between the rows rather than use the same soil as was thrown out. A rapid way of removing old dead trees is by the use of dynamite.

The Thrift Magazine makes its appearance

The first number of the Thrift Magazine, published under the direction of the National War Savings Committee, has made its appearance. It is edited by Mr. W. J. Dunlop, B.A., director of the schools section of the W.S.S. organization, who is also editor of The School.

The special purpose of this publication is to further the War Savings and Thrift Stamps movement among the schools of the Dominion. Ten numbers are to be published by June, the intention being to bring them out at fortnightly intervals. The Thrift Magazine is supplied free to every teacher in Canada and may be had on application to the office of publication, 371 Bloor St. West, Toronto. Pupils, school inspectors, public libraries and persons generally interested in Thrift education may also receive the Magazine by applying to this address.

For Your Aching Head

Take one ZUTOO TABLET and in 20 minutes, the pain is gone and you feel fine.

ZUTOO will stop any Headache, Sick, Nervous, Dyspeptic or Monthly—in 20 minutes by the clock. 25c at dealers.

The Clergyman's Parrot

A old lady in indifferent health who had a pet parrot told her old servant she had left her one pound a week so long as Polly lived. One day, the servant, who was long to receive the promised pension it is feared, said, in an impatient voice, "If the old lady would only die!"

A short time after the mistress came in, when Polly cried out, "If the old lady would only die!"

Terribly upset and thinking her end was near she sent for the parson, a near neighbor.

Hearing her tale, and seeing the depression caused by Polly's speech, the parson said, "Oh that's nothing, parrots say all kinds of foolish things, the bird is perhaps dull and wants a companion. I will send my bird over: he is full of spirits." In a short time the parson's parrot was brought in. When the cover was taken off its cage, the old lady's bird at once repeated his new phrase, "Oh if the old lady would only die!"

Hardly had it uttered those words before the parson's parrot responded in the voice of his master, "We beseech thee to hear us, good Lord."

Rev. John R. Cummings, pastor of the Walkerton Roman Catholic Church, died at Hamilton as a result of injuries received in a train wreck near Harrisburg ten days ago.

Leslie West, son of Thos. West, whose barn on the Cornack farm, near Woodstock, was burned, was arrested and it is alleged, confessed to setting fire to it but could give no reason.

NEW FOOD REGULATIONS

Dr. G. C. Creelman, Commissioner of Agriculture for the province of Ontario and Principal of the Ontario Agricultural College, Guelph, addressing the Agricultural Club of Ottawa at the University Club Rooms there, repeated a message to the farmers of Canada from Right Hon. R. E. Prothero, Secretary of State for Great Britain:

"I asked him for a message to the farmers of Canada," said Dr. Creelman, "and he told me that they wanted our chilled beef and that Canada should develop the chilled beef trade right away in preference to the live cattle trade. He urged that there should be no delay. He also said that after the war Great Britain would not devote so much effort to raising hogs, because they could be fed cheaper on this side of the Atlantic and as long as she can get pork products from this continent she would be satisfied to do so."

Dr. Creelman, remarking on the present hold-up in the bacon purchase, said that while he had no direct information he regarded it as merely a temporary congestion.

The Canada Food Board has been informed that field and garden seeds have been removed from the restricted export list of the United States, and that American shippers in future do not require licenses for shipments of seeds coming into the Dominion.

The removal of United States restrictions on flour also extend to Canada.

The Martinet

Strict discipline is excellent, it is essential, but the martinet carries discipline too far.

A martinet colonel gathered his officers about him last month and issued orders for the regiment's forthcoming train journey to their homes.

"I don't object to an innocent good time on the men's part during this train journey," he said, but you will, of course, see to it that there's no cursing or profanity, no skylarking, no card playing, and as little cigarette-smoking as possible."

"Pardon me colonel," said a timid voice.

"Yes, captain. Speak up. What it is?"

"Pardon me, colonel, but would you object if I took along a little plain sewing to occupy my company and myself?"

Had No Gas Mask

The war being now virtually over, the following story, recently related with great gusto by General Petain, is perhaps a bit out of date. But it is a rattling good one, so here goes.

An American soldier in a front line trench (said Petain) was smoking furiously one of those big, black cigars our trans-Atlantic allies so greatly favor.

Suddenly he took it from between his lips, and offered it to a French soldier standing next to him.

"Here, Leon," he said, "hold this cigar a moment while I leave a bomb into the German trench."

But the Frenchman recoiled in dismay.

"Non, non, Monsieur!" he loudly ejaculated. "Non, non! I will hold zee bomb, while you throw zee cigar."

The Same Old Story

"Miss Willing," began the young man as he wiped the perspiration from his brow, "are you fond of stories?"

"If they are new, Mr. Woodby," replied the fair maid. "I simply dote on them."

"But the one I was going to tell you, Miss Willing, is not new," said the young man. "It is, I might say, Miss Willing—or, I might say, the old story, but—"

"Oh, never mind, George," she interrupted. "Even if it is a chestnut, I'm sure I never heard of it. Go on, please!"

Limitless Space

"If," says the Literary Digest, "the sun were in one corner of a schoolroom in Massachusetts, and the earth were in the opposite corner, where would the nearest fixed star be? Most of our readers will be surprised probably to hear that one would have to travel out to Denver, Col., to find it, while to reach the great cluster in the constellation Hercules would require a journey out into space 12,000,000 miles."

Bobbie Was Wise

"Bobbie!"

"Yeth, auntie."

"Would you like to have a piece of brown bread with raisins in it?"

"Yeth, auntie, after you."

"Here you are."

"Give that to Lizbeth."

"And now, here's yours."

"Give that to Willie."

"Now, do you wish yours?"

"Yeth, ma'am."

"You are a very polite little boy."

"Yeth, ma'am, and besides, there is always more raisins in the pieces nearer the bottom of the loaf."

RATIONS FOR DAIRY CATTLE.

Corn Stover Used for Cows and Young Stock.

While corn stover and straw from the various cereals are not adapted for producing the largest flow of milk, they may be fed to dairy cattle. The amount to use of these materials will depend, of course, upon the supply at hand on the farm.

When an abundance of corn stover is available it should form one of the main sources of dry roughage for dry cows, young stock, and cows in milk. To use stover economically it should be cut or shredded, for then it will be eaten more completely and there will be less waste.

Corn stover may be fed to milking cows without limit, when they receive in addition grain, silage, and some leguminous hay. Under these conditions the ordinary cow will eat a large part of from 6 to 8 pounds of stover daily. For dry cows and young stock the proportion can be greatly increased, care being taken to be sure that there is plenty of protein in the ration. In certain instances corn stover has been cut and put into the silo with the addition of plenty of water, and the resulting silage is of fair quality. If a silo is available, a party of 25, or even fodder which has been well shocked

and is not severely weathered may be ensiled to advantage. Put up in this form it is more convenient for feeding in the barn, and cows will consume more of it than if fed dry.

Oat, barley, and wheat straw can form a considerable portion of the dry roughage for all classes of dairy cattle. Straw is used in much the same proportions as corn stover, and a sprinkling of thin molasses has been found to increase greatly the palatability, causing the cows to consume large quantities of the straw.

When feeding barley straw it is advisable to examine the mouths of the cattle occasionally, as the beads of the barley when very dry and stiff sometimes cause painful irritations.

Ewe straw cannot be recommended for dairy cattle, because of danger from ergot and on account of the very tough and fibrous nature of the straw. Buckwheat straw has a very low feeding value and should be used when other roughages are not obtainable, but in no case should any straw be wasted. What cannot be fed should be used for bedding. The following rations containing corn fodder and straw should give good results with dairy stock:

Ration for dry cows, bulls and heifers—Clover hay, 10 lbs.; Corn silage, 20 lbs.; Cottonseed meal, 1 lb.; Corn-and-cob meal, 2 lbs.; unlimited corn stover and straw.

Ration for cow about to calve—Corn stover, 5 lbs.; clover hay, 12 lbs.; corn silage, 25 lbs.; wheat bran, 3 lbs.

Ration for Cow Giving 16 lbs. of four per cent. milk—Clover hay, 12 lbs.; corn silage, 20 lbs.; cottonseed meal, 2 lbs.; corn-and-cob meal, 3 lbs.; unlimited corn stover and straw.

Ration for cow giving from 20 to 25 pounds of 4 per cent. milk—Clover hay, 12 lbs.; corn silage, 25 lbs.; cottonseed meal, 2 lbs.; corn-and-cob meal, 3 lbs.; gluten feed, 3 lbs.; corn stover and straw, unlimited.

Bird Puzzle to Scientists.

The dense tropic jungle of the Amazon valley is something more than merely a jungle. It is the point where the dim ages of the past meet the present. Many of its plants and animals seem to be at least cousins to those that existed in and before the Cretaceous of the earth.

One of these "throw-backs" is the hoatzin, the strange bird whose home is in those almost inaccessible regions of tangled forest, muddy rivers and daily rainstorms. The hoatzin is not a new discovery. It has been known to exist for a long time and has always been somewhat of a puzzle. It shows so much of the reptilian in its makeup, especially when young, that the experts are almost convinced that it is the direct descendant of the pterodactyl, that giant flying bird-reptile that soared over the new-born earth in the days when the caveman was first learning to pit his dawning intellect against the strength and cunning of the brute. When grown it shows structural resemblance to several classes of birds, including the peafowl and the domestic chicken.

A Valuable War Prize.

Two islands situated northwest of New Zealand that were taken by Great Britain from Germany recently, contain phosphate deposits which will be of great assistance to the farmers of the Empire. The quantity of phosphate rock available is estimated at a half billion tons, and as fertilizer is said to rival the famous nitrate fields of Chili. The Australian and New Zealand Governments are urging Great Britain to turn the islands over to them in order that they may be developed immediately as fertilizer sources.

Hardwood Ashes.

According to analyses made by the Division of Chemistry, Experimental Farms, unleached hardwood ashes free from sand, etc., will contain between 5 and 6 per cent. of potash about 2 per cent. of phosphoric acid, and from 20 to 30 per cent. of lime.

Sweden has areas of peat deposits that are estimated to cover nearly 9,900,000 acres.

SPECIALIST SAID HE MUST OPERATE

She Took "FRUIT-A-TIVES" Instead, And Is Now in Perfect Health.

MME. F. GAREAU

153 Papineau Ave., Montreal.

"For three years, I suffered great pain in the lower part of my body, with swelling or bloating. I saw a specialist, who carefully examined me and gave me several tonics to take, which did not help me. Then he told me I must undergo an operation. This, I refused to permit."

I heard about "Fruit-a-tives" and the wonderful results it was giving because this medicine is made from fruit juices, so decided to try it.

The first box gave great relief; and I continued the treatment, taking six boxes more. Now, my health is excellent—I am free of pain and swelling—and I give "Fruit-a-tives" my warmest thanks."

MME. F. GAREAU.

50c. a box, 6 for \$2.50, trial size 25c. At all dealers or sent by Fruit-a-tives Limited, Ottawa.

Waste in Boiler Heating

When burned under boilers to produce power, less than 15 per cent. of the heat units in coal is utilized, showing that it is uneconomical to burn it in the ordinary way, according to data contained in the ninth report of the Commission of Conservation. By low temperature carbonization the valuable light and heavy oils are obtained, the gas can be used to generate power, and the residue coke can be burned in the ordinary way to produce heat and power.

The anti-loading regulations of April last have been rescinded, owing to altered industrial conditions.
