WHEN WRITING TO ADVERTISERS PLEASE MENTION THE GUIDE

GET THE DAIRY FORMS

Perhaps some of your cows gave 25 pounds of milk yesterday, and some gave 22, the difference of three pounds in the day, a pound and a half in the milking might easily be overlooked. In fact, the smaller quantity might appear the larger on account of more foam on top, and might easily pass as the larger mass if not weighed.

But a pound and a half at a milking may amount in a lactation period to a thousand pounds and that is worth consideration.

In the plan of cow-testing advocated by the Dairy Division, Ottawa, no man could be a thousand pounds astray in his judgment between two cows, for he would have the weight given by each cow jotted down at the time. Some men weigh three days per month, many prefer to weigh daily, it is better. The two different printed forms are available for free distribution. Write and get them, stating which you prefer, the daily or three-day form.
