RED ROSE TEA "is good tea"

Folks who want the very best use RED ROSE ORANGE PEKOE

NOTICE OF SALE

To Archibald F. Ferguson, of the Town of Campbellton in the County of Restigouche and province of New Brunswick, Executor of the Will of Robert L. Duncan, late of the said Town of Campbellton, and all others whom it may concern:

NOTICE IS HEREBY GIVEN that under and by virtue of a power of Sale contained in a certain Indenture of Mortgage, bearing date the Ninth day of May A. D. 1916, and made between Robert L. Duncan of the Town of Campbellton in the County of Restigouche and Province of New Brunswick, Farmer, of the one part, Mortgagor; and Joseph Pichette, of the same place, Sewing machine agent, of the second part, Mortgagee, recorded in the Records of the County of Restigouche as No. 15, 717 on pages 227 to 231 of Book "L2" of the said Records.

There will, for the purpose of satisfying the money secured by the said Indenture of Mortgage, default having been made in payment of principal and interest thereof, be sold in front of the Post Office in the Town of Campbellton in the County of Restigouche, on MONDAY the THIRTY-FIRST DAY OF MARCH A. D. 1924, at the hour of twelve o'clock at noon, all the lands and premises described in the said Indenture of Mortgage, bounded and described as follows:-

"Beginning on the southerly side line of the Intercolonial Railway lands at the northwesterly angle of lands heretofore conveyed by the said Robert L. Duncan to the said Joseph O. Pichette; thence running Southerly (south five degrees and thirty minutes west) One Hundred feet; thence easterly parallel with said southern side line of said Railway lands, one hundred feet, till it strikes the dividing line between lands of the said parties hereto; thence Southerly following said dividing line (south five degrees and thirty minutes west) until it strikes the northerly side line of the Tobique Road, commonly called, thence Westerly following the various courses of the said Northerly side line of the road until it strikes the Easterly side line of the John B. Christopher Estate lands; thence North five degrees and thirty minutes east, along said Christopher line till it reaches the said southerly side line of said International Railway lands; thence Easterly along same to the place of beginning."

TOGETHER WITH all buildings and improvements thereon and the rights, privileges and appurtenances to the said land and premises belonging or in any manner appertaining.

DATED at Campbellton in the County of Restigouche this Twenty-eighth day of December A. D. 1923.

(Sgd.) Joseph O. Pichette
Mortgagee.

Starting The Incubator

(By C. H. Chesley)

Before telling how to start the incubator it may be well to give the reasons for using the incubator at all. Of course, it is less work to hatch chicks with hens, and, if but few are wanted, and those at a time when the hens will set, by all means use the old hen. However, the man who wants a considerable number of chicks and wants them early must use artificial means of incubation. You cannot get many chicks in March or earlier if you are obliged to depend on the hen. It is necessarily more work to take care of chicks hatched in an incubator, but, on the other hand, there should be no trouble from vermin. This is a big item in raising a flock of pullets. When you get the incubator, read the rules for running it carefully, and follow them religiously. It matters little whether the machine be of the hot-water or hot-air type. Start the machine and see that it runs properly and holds the requisite degree of heat. It should be said that the machine must be carefully levelled as this is of considerable importance in maintaining even temperature. Have the machine of the proper temperature when the eggs are put in. The temperature will drop at onie, but you should be able to get it once, but you should be able to get it hours.

For the first ten days after the eggs are placed in the incubator, I try to keep the temperature between 102 degrees and 103 degrees. In the latter half of the hatching period, the heat should not run below 103 and may go as high as 105 without serious results. However, I would try not to allow it to run aoove 104 for the best results. When chicks begin to hatch the temperaure will naturally run high. It will have to be regulated by turning down the light.

As to ventilation and moisture, the different types of machine employ different devides, and no advice can be given to take the place of the directions which come with the machine.

The matter of cooling and turning eggs is probably a result of man's effort to imitate nature. The hen leaves her nest nearly every day, and she frequently moves the eggs about. I have not always followed this rule strictly, but in general it may be said that eggs should be cooled and turned daily. In my hatching, I usually attend to filling and trimming the lights in the afternoon, and some time previous the eggs have been turned and attended to. Never handle the egg immediately after attending to the lights, as it is a difficult matter to get the hands entirely free from the kerosene at once. Clean hands are important when handling eggs.

HORSE AILMENTS of many kinds quickly remedied with DOUGLAS' EGYPTIAN LINIMENT

The best all-round liniment for the stable as well as for household use. Cures thrush, sprains, bruises, STOPS BLEEDING INSTANTLY AND PREVENTS BLOOD POISONING. Keep it handy.

At all Dealers and Druggists.

Manufactured only by DOUGLAS & CO., NAPANEE, Ont.

PULPWOOD.

GILLETT'S 100% PURE FLAKE LYE

This famous household cleaner and disinfectant is now made in *Crystal Flakes* instead of powder. It is the *best* household lye on the market. Use it for cleaning and disinfecting sinks, closets, drains, etc.; destroying vermin; softening water; making soap; cleaning floors, greasy pots and pans, etc.; removing paint, etc.

Avoid inferior and dangerous substitutes. Get the genuine article in cans as reproduced below.

I never turn eggs until the third day, hence they do not have any cooling until that time. Do not worry about eggs getting too cool. I have had a good hatch after a lamp had gone out and the machine had become practically stone cold. However, it would not be safe to consider that as a rule to follow. The turning, in the ordinary machine, is a question of removing one row of eggs and rolling all the others over one turn.

I test the eggs twice. With brown-shelled eggs the first test is made the eighth day, while with white eggs the test can be made the fourth or fifth. Infertile eggs appear as nearly clear, while those with live germs have spider-like developments within. The second test is made at the end of two weeks, and is for the purpose of removing dead germs, that is, these which started to develop and failed to survive.—Indiana Farmers' Guide.

POULTRY

KEEP THE LITTER CLEAN

Scratching litter in the poultry horse, if kept clean and dry, is an aid to egg production, but if the litter is permitted to become damp or filthy it is a fruitful source of disease

The cause of roup, colds, and chickenpox is often traceable to damp, unclean litter. A bale of musty straw used as litter has often caused the death of hens.

How often the old litter should be removed and replaced by new depends on the number of birds in the house, and dryness of the floor.

If each bird has four square feet of floor space all the litter should be removed once a month. Two weeks after new litter is put on the floor it should be forked over so as to sift out the fine material, which is swept up and removed. Some fresh material is then added to the old.

If the floor is damp the litter should be removed every week. The floor should be covered with four to six inches of litter at all times.

Serious loss of poultry is often due to the use of moldy straw for scratching litter. In such cases, according to D. C. Kennard, specialist in poultry at the Ohio experiment station, the birds affected breathe with difficulty and often wheeze or gasp for air.

The symptoms are similar to a cold in the windpipe or bronchitis. The respiratory system of a chicken is so complicated that an excessive amount of dust of any kind is injurious and especially is this true of the dust from moldy straw.

Recent reports of heavy losses of pullets from this cause have been made. A heavy loss of birds may result in a few hours, it seems, and one bale of moldy or musty straw used for scratching litter may mean a serious loss of birds.

Ready for a Change.

"I wish," said the little invalid, who was being washed in bed, "that I need never, never have to be washed again."

"N'm afraid," said mamma gently, "that as long as you have me to take care of you you'll have to reconcile yourself to be washed thoroughly every day."

The invalid pondeded for a moment. "Then," said she, "I shall marry very early."—Los Angeles Times.

Should Have a Large Practice.

"If you think there's something wrong with your heart, why don't you consult a specialist?"

"I'm afraid he would say it was something fatal."

"Oh, nonsense! He wouldn't; he is an awful good sort!"—Boston Transcript.

SELECTING A FERTILIZER

Compared with many other countries Canada is a low consumer of commercial fertilizers. The general system of mixed farming followed over much of the older parts of the country is no doubt responsible for this, as the rearing of live stock coupled with the growing of leguminous feed crops and the feeding of the coarse grains on the farms keeps up the fertility of the land to a great extent. It may be, however, that for greatest profit, too much dependance is placed on the returns made to the soil in this way, but with low returns from ordinary farming operations, few care to spend money on fertilizers, and it is only when one is producing a crop of relatively high value and when no stock is kept that the risk will be taken. And it has been a risk in many cases because of a general lack of assurance that purchasable fertilizer pays. That fertilizers do pay and pay well, particulrly for garden and fruit crops, many, who have learned by experience to distinguish between formulas and brands, can testify. The appearance of a fertilizer is no indication of value, nor is the odour, which sometimes suggests great strength. The latter as a guide to plant food content, is unreliable, and it is after all the nourishment content that gives a fertilizer its value. It will be well for the Canadian crop grower when they can so distinguish brands and understand formulas as to be able to purchase with discrimination, and with the same confidence as when buying certified seed of a required variety. A long step has been taken in this direction by the passing of the new Fertilizers Act and the adoption of the inspection system administered by the Seed Branch at Ottawa. A report of official analyses of more than four hundred fertilizer samples made during the past year shows a wide divergence of quality in the brands. This report, which is issued as Pamphlet No. 41 of the Department of Agriculture at Ottawa, is an enlightening document for those who desire to study the subject.

PUBLIC NOTICE

Notice is hereby given that we the undersigned Assessors have received the assessment warrant for the Paris of Addington for the year 1924, and that all persons liable to be rated are requested to bring to the assessors within thirty days from the date of this notice a true statement of all property and income liable to be assessed and that the valuation list will, when completed, be posted up at Charles Alexander's Store, Joseph Duncan's Store, Campbellton, Abe Comeau's Store, Athol, P O., Tide Head, T.
