WATFORD, DECEMBER 17, 1915.

NOTE AND COMMENT

We notice the Crown Prince's troops are reported as asking for rugs and carpets for the winter. Well, at least they will be getting something that will be easy to beat.

A complete redistribution of the work of liquor inspectors throughout Ontario, including a reduction of their number to about one-half the present number engaged in this work, is expected to be undertaken by the Ontario License Board about the first of the year.

Victoria Times: Henry Ford and his associates will be struck by the change in climate in Great Britain and France since they were there last. They will find the temperature about forty below zero; in fact, it will be so cold that the .two governments will provide them with an unostentatious escort to see that they do not suffer from frost-bite.

Saskatchewan's wheat yield averages 25.2 bushels per acre, a remarkably high figure. Only once before, in 1901, has it been exceeded, and then the Province had less than half a million acres in crop. This year 6.844,000 acres were cropped. Alberta's thrashing returns to date indicate the wonderful average of 38 bushels of wheat per acre.

Almanac The Rev. Irl R Hicks 1916 Almanac

The Rev. Irl R Hicks 1916 Almanac is by far the finest, largest and best ever before printed. The Hicks storm and weather forecasts for 1915 again have proven their truth and value, and this splendid Almanac for 1916 should find its way straight into every home and office in America. The Rev. Irl R. Hicks Magazme, Word and Works, and his unique Almanac should always go to-gether, both for only ONE DOLLAR a year. The Almanac alone is 35c, post-paid. Send to WORD AND WORKS PUB-LISHING COMPANY. 3401 FRANKLIN AVE.

Young Fish. The brook trout is a nest builder, but does not belong to the group of fish which cares for its eggs and young. When the function of egg laying is completed and the nest covered with gravel the parent fish seem to feel that their whole duty has been performed, and they depart, leaving both eggs and the young when they are hatched to the care of nature, and nature, it must

be confessed, is generally neglectful of her charge. Early in autumn the mature brook trout in pairs seek the gravelly bottoms of shoals and spring runs. Here with nose and fins they hollow out a

shallow basin and make it scrupplonsly clean. This is their nest, and over the bottom the eggs are scattered, covered with gravel, and their duty to posterity is ended. Only a small proportion of the eggs deposited naturally are fertilized, and

many of these are destroyed by spawn eating fishes. Most of the tiny fish which do develop and succeed in punch-

ing a hole through the egg shell with their little tails and emerging into a

UNDERDRAINAGE.

Poorly Drained Soil is a Heavy Draw back to the Farmer.

The late fall, after the rush of harvesting is over is the proper time to install a system of underdrains. The effects of underdrainage, as briefly summed up in "Soils: Properties and Management," published by The Mac-millan Company of Canada, are as follows: The need and value of thorough

drainage of the soil can often be bet-ter appreciated after a careful summary of its effects on the properties mary of its effects on the properties that determine crop growth. From a study of these it may be seen that for the production of the ordinary up-land crops a reasonable amount of land crops a reasonable amount of soil drainage is the first requisite. It may well be termed the foundation of good soil management. The more noticeable effects are as follows: Drainage permits the development of the granular structure in soils es-

of the granular structure in soils, especially in those containing much clay, and thereby permits the crea-tion of a much better filth. The filth is brought about by the frequent changes in moisture content of the soll made possible by drainage coupled with other natural and artificial agencies, as has already been ex-plained. As a result the soil main-tains the open and friable condition favorable for the absorption of rain water, and the circulation of the wa-ter in the spaces in the soil without interference with the crop roots. The tendency of the soil to puddle and form large, hard lumps is reduced.

The withdrawal of the excess wa ter from the large spaces in the soil permits the admission of air into those spaces. This results in better ventilation. The free movement ventilation. The free movement downward through the soil of the waves of saturation accelerates the process of deep soil ventilation by driving the contaminated air ou through the underdrains while fresh out aid is drawn in behind the wave of

The removal of the excess mois-ture by drainage permits the soil to maintain a higher average tempera-ture. The high specific heat of water as compared with the soil causes the

of its volume. If the soil is too nearly saturated, this expansion is expressed at the surface of the soil

expressed at the surface of the soil by a lifting, or heaving, which is ex-ceedingly injurious to most crops that pass the water in the soil. It breaks their roots and gradually lifts the smaller plants out of the ground if the process is many times repeated. When the soil is drained so that free is process are distributed theorem the

air spaces are distributed through the mass, the expansion of the water as it freezes is taken up in these spaces without heaving at the surface.

Drainage reduces erosion of soils by withdrawing the water through the soil instead of permitting it to

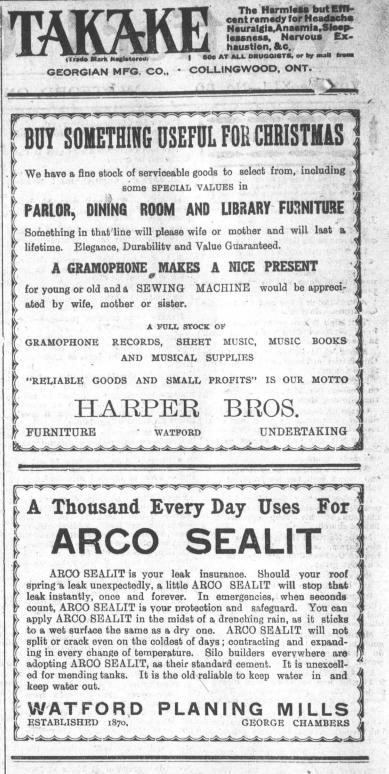

the soil instead of permitting it to accumulate to the point where it must move over the surface, often with serious erosive action. In order that the drains may be efficient, the soil above the drains must be suffi-ciently porous to permit the removal of the water as fast as it accumulates,

For Asthma and Catarrh.-It is one o

For Asthma and Catarrh.—It is one of the chief recommendations of Dr. Thomas' Eclectric Oil that it can be used internally with as much success as it can outwardly. Sufferers from asthma and catarrh will find that the Oil when used according to directions will give immed-iate relief. Many sufferers from these ailments have found relief in the Oil and

Christmas Appe FOR The Hospital for Sick Chi

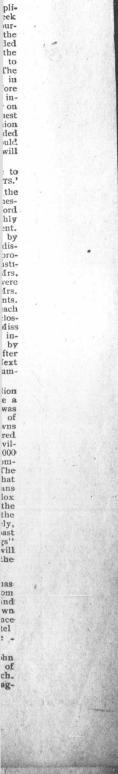

COLLEGE ST., TORONTO Dear Mr. Editor:-

Thanks for your kindness in ing me the privilege of appeal this Christmas time on behalf Hospital for Silk Children, Torc In the 40 years of the Hospitz istence there have been treated its walls 26,108 children as in-pa 8 as out-patients; a gran of 257,876 in and out-patients, a grant of 257,876 in and out-patients. The Hospital for Sick Childrer a province-wide service, for patients from every section of tario have sought its aid. tario have sought its aid. year 499 patients were admitter 232 places outside the city of T/ in 1914 there were 394 from 210 Of the 2,838 in-patients las 3,771 were medical cases and so gical. In the orthopedic depa ot the 2,838 in-patients, 264 treated for deformities, 21 Poti ease of the spine, 10 lateral cu of the spine, 10 lateral cu of the spine, 10 lateral cu of the spine, 10 hateral cu 17 dislocations of hip, 42 tub disease of knee, hip, ankle, wri elbow; 76 infantile paralysis, neck, and 21 miscellaneous. Our battle is never-ending that will continue while the worl for it is the fight between the arr life and death, to save the chi the sick little ones, sons and day mot only of our soldier men, the fathers and mothers still home-land province. The Hospital is beating base ease and death, the enemies to mail the lives of little c'ildren British Empire is beating bac-many. Austria and Tuykey, the miss that assail the life of libe So we appeal to the generous of Ontario not to forget those s and dear to us, who lie in the be-cots of this great charity. Will the people at large, as home-land province. " will the people at large, as respond to our call? Will they ber that every year is a war of the Hospital, every day a day o and that the Hospital needs and that the Hospital needs not for its own sake, but for the dren's sake? The Hospital has waged its forty years. The people of 7 and Ontario have been its frieand Ontario have been its frie: this year of all years it require Surely you will give to a chari-cares for every sick child in (for only as your money reac) Hospital can the Hospital's reach the children. Every dolfar is a link of kind the chain of mercy that joi money in your pocket to the r of some child's life, some n heart. Remember that Christmas c heart. Remember that Christmas c to open the purse of your kind the Hospital that the Hospit pen the heart of its help hildren. Will you send a dollar, or you can, to Douglas Davidson try-Treasurer, or

are helping to rush a new war railway in Russia to completion. The road runs direct from Petrograd to Katherine Bay, a small gulf on the Arctic Ocean, and almost on the frontiers of Norway. Through the beneficient influence of the Gulf Stream the waters never 'freeze, and Katherine Bay will thus be the only winter port in the far north in the Russian domain free from ice all winter.

Buffalo Express:-The owners of the wheat which the Dominion government took over on Saturday have no cause for complaint at the prices fixed by the government, unless, of course, they were holding the wheat in the expectation that they could get higher prices later when a squeeze came. The government has dealt fairly by them and no sympathy will be felt for them in Canada because they failed in their speculative game. No one will be surprised if the Dominion government does the same trick again some day. It certainly is a common-sense thing to do.

No man in history stands out as possessing a more humane heart or a greater command of sympathetic expression than Abraham Lincoln, the Liberator. It may not be amiss to recall a letter which he once wrote to a mother who had lost five sons in the American Civil War, and which has long since taken its place with the classics. This is the letter: "I have been shown on the file of the War Department a statement of the Adjutant-General of Massachusetts, that you are the mother of five sons who have died gloriously on the field of battle. I feel now weak and fruitless must be any word of mine which should attempt to beguile you from the grief of a loss so overwhelming, but I cannot refrain from tendering to you the consolation that may be found in the thanks of the Kepublic they died to save. I pray that our Heavenly Father may as-suage the anguish of your bereave-

lodgment in some larger fish. As a foster parent the trout culturist is a greater success than Dame Nature. The latter, under the most favorable circumstances, rarely succeeds in hatching more than 10 per cent of the eggs deposited, while the former expects to develop into wiggling fishes nearly 50 per cent of the eggs obtained.

Getting the Better of an Invention Very wrong verdicts are come to by people who use modern inventions in the wrong way. The moving staircase

at the embankment station offered a from drainage permits the roots of plants to penetrate deeper into the soil, where they come in contact with proof of this. A countrywoman was seen trying to ascend the descending a larger supply of moisture and food One of the indications of the need of drainage is the shallow root developside of the moving staircase there. There was no official about, and after two plucky attempts she at last made ment of crops. Stagnant water in a saturated soil is as resistant to the penetration of upland crops as is the progress and doggedly worked her way up to the top. Some people who saw, her efforts waited for her at the top. Drainage reduces heaving. Heav-ing, or the lifting of crops by frost action in the soil, indicates the pres-When she recovered her breath she said, "Eh, I don't think them movin' staircases all the talk's about is any ence of too much moisture in the soil in proportion to its pore space. When water freezes it expands one-eleventh better than the old lift."-Manchester Guardian.
