A LIST OF MANITOBA MOTHS.—Part III.

BY A. W. HANHAM, WINNIPEG, MAN.

The Noctuids of this Province, as already known, make a very fair list, and include a number of rare moths, as well as a good percentage of new species. I have seen all Mr. E. F. Heath's things, and his additions to my list are quite numerous; these appear as taken at Cartwright. The Rounthwaite records are Mr. L. E. Marmont's (I have seen his collection), and he has added some rare species. The Brandon records are in some cases my own, as I have visited there the last three summers; others are Mr. H. W. O. Boger's, of that place. I have seen paintings of a number of moths collected at the Douglas swamp by Mr. Criddle, of St. Alban's, Aweme, and these have given me a few extra names.

My best collecting here has been done at light, at Brandon off bloom on the prairies, and I have also had very fair success, both here and at Brandon, from sugaring late in the season (from the middle of August until early in October).

A very large proportion of the species listed have been referred to Prof. John B. Smith, who has been untiring in his efforts to help me, and without whose kind assistance this list would have been impossible, or very incomplete. A few things, still doubtful, remain in his hands for future determination. Others, that would have increased my list, came to grief in the mails. These species, it is hoped, will be taken again during the coming season.

Thyatira scripta, Gosse. Cartwright.

Euthyatira pudens, Gn. Rounthwaite; one at black currant bloom early in May.

Pseudothyatira cymatophoroides, Gn. Common at light, end of June and early in July (1897); also netted at dusk flying along the edge of the woods close to my house.

Pseudothyatira expultrix, Grt. One only, at light, beginning of July.

Leptina latebricola, Grt. Cartwright.

Panthea acronyctoides, Walk. July 12th; one at light.
