

*CHIMAROCEPHALA PACIFICA* (Thomas).

Three females ; March 23 and 24, and April 10, 1901.

*STICTHIPPIUS CALIFORNICUS* (Scudder).

Two females ; June 14 and August 13, 1901.

An examination of these two specimens shows that *marmosatus*, Scudder (Psyche, VI., p. 318), is probably only a variation of this form, one of the specimens having the anal vein free on one tegmen and entangled on the other, this character being used by Scudder as a differential one, while the maculations of the tegmina seem of no greater value.

*SPHARAGEMON VENUSTUM* (Stal).

Four males and three females ; May 18, 20, 25 and 28, and June 5, 1901.

These specimens have the hind tibiæ glaucous or dull lutescent instead of blue.

*DEROTMEMA SAUSSUREANUM*, Scudder.

One immature female and one male ; July 17, 1901.

*CONOZOA BEHRENSI*, Saussure.

Six specimens : four males, two females ; September 22 and October 3, 1901.

*TRIMEROTROPIS REBELLIS* (Saussure).

*Trimerotropis cristata*, Rehn (not of McNeill), Trans. Amer. Ent. Soc., XXVII., p. 333.

Four specimens : three males, one female ; April 14 and May 18 and 28, 1901.

*TRIMEROTROPIS VINCULATA*, Scudder.

Twenty-nine specimens : ten males, 19 females ; March 23, April 4, 11, 17, 22 and 30, May 9, 15, 18, 25, 28 and 31, June 5, July 25, and October 22 and 30, 1901.

*HELIASTUS CALIFORNICUS* (Thomas).

One female ; March 29, 1901.

*DRACOTETTIX MONSTROSUS*, Bruner (?).

One immature female ; May 4, 1901.

This specimen differs somewhat from Bruner's figure of *D. monstrosus* (Proc. U. S. Nat. Mus., XII., pl. 1, fig. 1), mainly in the form
