\$1 per annum.

THE use of Fairchild's PEPTOGENIC MILK POWDER involves two distinct steps:—

First, to prepare with cows' milk, water and cream, a mixture which is identical with human milk in its quantitative composition.

Second, to render this milk mixture qualitatively like human milk, by converting its caseine into soluble albuminoids.

This "humanized milk" remarkably resembles breast milk in physical, chemical and physiological properties.

The Peptogenic Milk Powder is the only known means of modifying cows' milk to the standard of average healthy human milk.

Samples and pamphlets sent gratis upon request.
