

# TELE-DIRECT (PUBLICATIONS) INC.

## COMPANY OVERVIEW

Tele-Direct (Publications) Inc. is a wholly-owned subsidiary of Bell Canada and is the directory publishing and marketing arm of Bell.

Tele-Direct has enjoyed healthy growth and successful diversification and, through affiliations and subsidiaries, is active on three continents.

## EXPERIENCE

Tele-Direct has acquired comprehensive experience in NAPLPS videotex. It was among the first active participants in the evolution of the technology and is committed to its future.

A videotex services department was established within the marketing division of the company in 1979. The department had three goals at that time:

- To acquire the skills and experience necessary to use videotex successfully in the commercial area as an electronic publisher.
- To participate in the Bell Canada Vista field trial.
- To position the company to take advantage of any business opportunity related to videotex.

Tele-Direct customers include:

- IBM of Canada
- Bell Canada
- Bell Canada International
- Telecom Canada (TCTS)
- Miracle Foodmart
- The Insurance Institute of Canada

- Cox Cable of San Diego
- The Co-operators
- Encyclopaedia Britannica
- San Francisco Videotex (California)
- Computer Communications Group (CCG)

## PRODUCTS AND SERVICES

Tele-Direct began to promote commercial videotex services in 1981. Since then, it has developed and created NAPLPS applications for many major companies.

The services provided by Tele-Direct include:

- **Consultation** — business, technical. Tele-Direct offers a consultation service based on the accumulated knowledge of videotex applications locally and abroad.
- **Training** — page creation, editorial, business. Tele-Direct offers videotex editor training. The candidate will learn all the techniques for page creation, especially the subtleties associated with the graphic and text modes of NAPLPS software. A senior management course will educate executives in all areas of the videotex technology. Included will be practical experience with videotex hardware and software.

- **Application design, conceptualizing, routing.**
- **Page creation** — based upon the client's input, Tele-Direct will create informative videotex pages, and supply a diskette as well as photographs or slides of the completed images. Because of the extreme flexibility of the medium, page content can be modified or updated on very short notice.

## FUTURE DIRECTIONS/ TARGET MARKETS

Discussions are under way with several system operators for Tele-Direct, as an information provider, to design an application for electronic yellow pages.

Tele-Direct's long-range target is based on the belief that consumers will require this new technology. Its corporate policy is to position itself eventually to develop wide-scale electronic yellow pages.
