## TEST YOUR SEED CORN

It Is More Uncertain Than That of Cereals.

Seed Tests Will Repay Corn Growers—The Sawdust Germination Box Method—Allow Eight or Ten Days for Germination—A Use for Old Fruit Jar Rubbers.

(Contributed by Ontario Department of Agriculture, Toronto.)

Without good seed satisfactory crop production is impossible. Good crops of wheat, oats, and barley are grown each year without a seed test before seeding. "Why can we not get the same condition in corn?" is frequently asked. Corn is different in many ways from the cereals mentioned, and we cannot expect the high germination common to well ripened before harvest grains. Corn ripens later in the season when damp days and nights are common. The grain is attached to an open pithy cob that is frequently slower in drying out than the grain in ripening. The corn is well protected by coverings as is the germ in the other farm grains. The fact that wheat, oats and barley can generally be sown without a test and relied on to germinate has led many farmers to believe that the same holds good for corn, and they hesitate to do the necessary careful work and prove to themselves the dependableness of the seed corn before planting.

Seed Tests Will Repay Corn Growers.

A few hours devoted to corn testing during the slack season in February or March will frequently prove of greater value in providing corn which will yield a satisfactory crop the next autumn than many days of hard work in the field during the season of growth. With the seed carefully tested, and provided capable of producing strong vigorous plants, the risk is removed from the most important of all the factors involved in corn-growing. Various methods of testing a germination test have been devised, and different measures of success in operation obtained. The elimination that follows experience has caused a discard of many methods and centered on the usefulness and simplicity of the Sawdust Corn Germination Box.

The Sawdust Germination Box.

This method requires a minimum of attention, it is easy to prepare, and it is sure. The box used as a container for the sawdust can be of any convenient size, easy to handle or stack up. Boxes 30 x 30 inches and 6 inches deep will be satisfactory and are large enough to test the seed ears required to plant five or six acres.

The seed bed is prepared as follows: Pack moist sawdust to the depth of three inches in the box (old or dry sawdust, hardwood sawdust is to be desired). Mark off in squares 2 1/2 x 2 1/2 inches with pencil a piece of cotton about the size of a handkerchief, number the squares. Lay this sheet over the sawdust, press down and moisten. Take six grains of corn from the ears to be tested, two from near the butt, two from the center and two from near the tip, and place these in each square, number the ear to correspond with the number of the square in which the six grains are placed. Using a piece of cotton of the same dimension as the box, lay it over the seed and press down gently, do not disturb the corn in the numbered spaces. Take a second cloth large enough to fold both ways or about twice the size of the box, lay this larger cloth over the box in such a way that it extends all around, cover the box area with warm, moist sawdust, piling directly on the last applied large cloth, pack the sawdust down well, by treading or stamping with a brick or heavy block of wood. This layer of sawdust should be two inches thick when firmed. Fold the extending portions of the box in such a way that it forms as it were a large pillow or pad.

Allow Eight or Ten Days for Results.

When this has been done, the box or boxes should be set away in a stable or room where the temperature is always above freezing, and generally maintained at 60 to 70 degrees. If mice abound, cover the box with a wire screen. After eight or ten days examine the germination for result. Lift off the sawdust pad and then very carefully roll back the cloth that is in direct contact with the corn. Take note of the germination of the kernels in each numbered square, and save or discard according to the strength of germination. Every ear that has given dead, mouldy or weak germinating kernels should be thrown into the feed bin, and only those showing great vigor and freedom from mould should be used. At the end of ten days the sprout and roots should be at least two inches long. The box, sawdust and cloth should not be used a second time without thorough scalding; this is done to destroy fungus spores that may be present. The outside two inches of space should not be used, as it may dry out and check the germination of any seed placed near the edge of the box—L. Stevenson, Sec. Dept. of Agriculture.

Inquiries are made as to the law regarding the placing of omitted names on voters' lists. The new law provides that election boards shall be formed for each county. The boards will be composed of judges of the district court, local registrar, sheriff and clerk of the peace. These boards may run the election under the authority of the chief electoral officer, Allan M. Dymond, of Toronto. Three members of any board form a quorum. The chief electoral officer is to advise the various county boards and supervise and instruct returning officers, poll clerks, and so on. As soon as convenient after the issue of the election writ these boards are to fix times and places in every municipality to hear complaints regarding voters' lists. Public notice must be given of such meetings. The last day for making complaints is two days before the date of the board's sittings. Any person entitled to vote can give notice of complaint as to any other person whose name should be on the list. Evidence before these boards is all under oath.

Use for Old Fruit Jar Rubbers. Old fruit jar rubbers came in handy last winter when the snow was on the ground. My boy stepped on an axe and cut a big gash in his rubber. I melted a fruit jar rubber to the consistency of wax, poured it into the gash and stuck it back in place. When it became cold the rubber was as good as new.

A man can farm any old way he likes on his own farm. But he can't get out of paying for privilege of doing things the wrong way. He pays in short crops and various losses that cut down his earnings.

## For Summer at New Ladies' Wear and Millinery Store

#### TAXES THAT DEFEAT THEMSELVES

An interesting example of the way in which high taxes defeat their own purpose is quoted by the Financial Post. At \$6 a thousand, cigarettes were heavily taxed, but Canadians smoked nearly 2,500,000,000 a year. The tax was increased last year to \$7.50 a thousand and smokers turned to pipes and to rolling their own. Cigarette consumption dropped by about half a billion a year and the government suffered a net loss in revenue of about \$2,000,000. The higher tax actually provided a lower revenue. Taxes that are too high will always defeat revenue purposes—Montreal Herald.

Rub it in for Lame Back.—A brisk rubbing with Dr. Thomas' Eucalyptic Oil will relieve lame back. The skin will immediately absorb the oil and it will penetrate the tissues and bring speedy relief. Try it and be convinced. As the liniment sinks in, the pain comes out and there are ample grounds for saying that it is an excellent article.

Hard and soft corns both yield to Holloway's Corn Remover, which is entirely safe to use and certain and satisfactory in its action.

## MARTIN-SENOUR 100% PURE PAINT & VARNISHES

### MARBLE-ITE

The Hard-Drying, Long-Wearing  
Floor Finish

#### "100% PURE" PAINT

The paint for wear and weather.

#### SENOUR'S FLOOR PAINT

It wears and wears and wears.

#### "VARNOLEUM" beautifies and preserves Oil Cloth and Linoleum.

#### "WOOD-LAC" STAIN

Improves the grain—removes the old.

#### "NEU-TONE" The sanitary, washable Flat Oil Paint for Interior Decoration.

Nothing adds so much to the beauty of a home as floors that are properly cared for; on the other hand, floors that are not protected are unpleasant to look at, are hard to keep clean, and become injured through wear. Don't neglect your floors, beautify them and save them. Save the surface and you save all.

MARBLE-ITE Floor Finish is the perfect treatment for floors of all kinds. It is the one floor finish that has a money-back guarantee attached to every can.

In 24 hours MARBLE-ITE dries hard with a beautiful finish that will not show heel marks. It has a high gloss, yet is tough enough to stand any amount of wear without injury. It can be washed with soap and water and it will not mar nor scratch white.

We invite you to call and discuss this method of beautifying and protecting your floors. We give you full details regarding this or any other painting or varnishing problem. We have a complete stock of MARTIN-SENOUR Paints and Varnishes. For every purpose—For every surface.
