Proceedings in Parliament—Domestic Bills—Industrial Exhibition—Foreign Affairs.

LONDON, March 8, 1850.

No business of importance has been transacted in the House of Lords. The only noticeable matter is a debate on the Ecclesiastical Commission Bill, which took place on Monday, the 25th ult., when Ministers suffered two defeats. Amendments, respectively proposed by Earl Powlett and the Bishop of Salisbury, and supported by Lord Stanley and his political friends, were carried in defiance of the wishes and opposition of Government.

Cross Examination.—It was nitrate of copper on the wall; I examined and ascertained it myself. The sea salt found with the potash was small, and not affected by potash; one side was red from iron; did not examine the inside of the furnace for potash; except where the potash had acted, the decomposition was not taken place at all; one side, the back, and the two ends, were affected by potash; the thigh was affected by potash, but the decomposition was not taken place at all; one side, the back, and the two ends, were affected by potash; the thigh was affected by potash, but the decomposition was not taken place at all.

THE COURIER. WEDNESDAY, MARCH 27, 1850.

Professor Webster's Trial for the Murder of Dr. Parkman. The interest which attaches to the proceedings now in progress in Boston, tending to criminate Professor Webster, may be gathered from the efforts which the journalists exert in furnishing the public with the simplest reports. The position which Professor Webster occupied for many years as a distinguished lecturer upon science, excludes him from the common herd of unlettered criminals, connects him by varied associations with the educated men of the land, and invests the trial with a celebrity which will long preserve his name in connection with the tragedy.
