

TRADE NOTES.

It is an important point in the treatment of pneumonia to reduce the dyspnea and irritating cough. This may be done without internal medication, and without disturbing the patient, by the use of vaporized cresolene. Vaporized cresolene has a marked sedative influence on all diseases of the respiratory organs attended with irritation and a spasmodic element.

Henry K. Wampole & Co. have opened a branch office in Montreal, No. 20 St. Alexis St. (over the Bank of Ottawa) which will be in charge of their representative, Mr. R. E. Pineo. It is the intention to carry but a limited stock in this office, that small city orders for immediate delivery, can be promptly handled.

During la grippe and afterwards the experience of thousands of physicians proves the value of Angier's Petroleum Emulsion. It braces the patient, and enables him to withstand the ravages of the disease and guarantees him freedom from the subsequent exhaustion and sequela. Angier's Petroleum Emulsion relieves immediately the cough and symptoms of respiratory irritation, palliates the nervous symptoms and hastens convalescence.

In the *British Medical Journal*, No. 197, p. 880, Thomas W. M. Blake, M.D., St. Andrews M.R.C.S., Eng., says: "Many patients with consumption or other wasting diseases appear to tolerate its (Angier's Petroleum Emulsion) use when cod liver oil cannot be tolerated. Instead of setting the stomach in revolt, as the latter will often do, it appears to soothe the mucus membrane and produce a more natural tone and power of assimilation. Petroleum does not irritate the nerves supplying the mucus membrane of the stomach, but doubtless cleanses away the foul mucus and leaves the digestive organs in a more healthy condition to perform their functions naturally. Nutrition is improved, therefore the condition of the weakened and diseased lungs improves."

A valuable Remedy in Intestinal Irritation, Louis Leroy, A.M., M.D., of Nashville, Tenn., writing in the February number of the *Medical Examiner and Practitioner* states that while Terraline has been restricted in its use largely to cases of bronchial inflammation or in allaying troublesome coughs, or for its nutritive value in conditions of emaciation, it seems that one of its most useful actions and broadest fields has been largely overlooked. This is the soothing effect which it has upon the mucous membrane of the gastro-intestinal tract. The oil is perfectly bland and tasteless and so thoroughly refined that it lacks the irritating fatty acids which are nearly always present in any of the oils used for internal administration. These qualities permit its administration in good
