Students of medicine, as well as pharmacy students, will undoubtedly welcome this work. The authors are teachers of much experience and in this forelying book present a work on the subject of Materia Medica in an entirely new way, teaching by actual experimental demonstration. Part I. comprises a guide to the study of crude drugs, both official and unofficial; while in Parts II. and III. the histologic and chemic examinations of drugs are considered in a scientific, yet clear and simple manner. All the histologic descriptions are supplemented by laboratory exercises of important drugs, so that the student becomes insensibly acquainted with their construction.
