

A decorative border of fish, likely cod, swimming in a circular pattern around the text. The fish are detailed with scales, fins, and eyes, and are arranged in a way that they appear to be swimming towards the center of the page.

Scott's Emulsion

is an emulsion of cod-liver oil,

Which contains the whole oil, all of it.

It is not a mixture of wine or alcohol with a little iodine and bromine.

It will not intoxicate nor lead to the alcohol habit.

It does not depend upon a stimulant for its therapeutic power.

It is, however, precisely what it claims to be:

*The Best Norwegian Cod-Liver Oil.
The Hypophosphites and Glycerine.*

Scott's Emulsion is a Food—not a stimulant.

Scott's Emulsion is a Fact—not an experiment.

Scott's Emulsion contains Fat—not a drop of alcohol.

Whenever cod-liver oil and the hypophosphites are indicated, we ask you to prescribe "Scott's Emulsion," always permanent and palatable.

SCOTT & BOWNE. Toronto
