

TESTIMONIALS.

Messrs. C. F. HILL & Co.

POST OFFICE, MONTREAL, 9th March, 1868.

Gentlemen:—Having at your request placed one of Eaton's "Automatic Ventilating Wood Stoves" in the lobby of this Office, for the purpose of testing its warming capacity for a building of this size, I beg to state that the result has proved the superiority of your Stove in every respect. The mode of test was rigid and exact, a thermometer having been kept at different points in the lobby during the week's trial. The period was from the 2nd to the 7th March, the 2nd being the coldest day of the winter. During the whole of the period the Stove was found quite equal in its warming power to the large 4ft. 6in. Stove ordinarily in use, while the consumption of wood was the difference between 30 sticks per day used in the large Stove and 10 used in yours, or, in other words, a saving of two-thirds in fuel. The outside temperature of the first day being 15° below zero, constituted a very severe test for a new Stove, the regulation of which was not understood by the messenger attached to this Office.

I have therefore much pleasure in communicating this result, and am,

Gentlemen,

Yours obediently,

E. S. FREER, Postmaster.

To C. F. HILL, Esq.

FIRE DEPARTMENT, CHIEF ENGINEER'S OFFICE, MONTREAL, 9th March, 1868.

Sir:—I have had one of Mr. Eaton's two-feet "Automatic Ventilating Wood Stoves" in No. 1 Fire Station, and from its superior construction and power of heating, with the same quantity of wood, the Station was kept at the same temperature for 108 hours as the 4ft. Stove, which is used in the Station, done for 41 hours.

Yours respectfully,

ALEX. BERTRAM,

Chief Engineer, Fire Department, Montreal.

C. F. HILL, Esq.

MONTREAL, March 4th, 1868.

Dear Sir:—Having substituted "Eaton's Automatic" Stove for the one we were using, and having given it a fair trial, we can confidently say our saving of Coal has been upwards of fifty per cent.

I am, yours, &c., &c.,

JOHN ROGERS & CO.,

Chemist and Druggist, 133 Great St. James Street.

C. F. HILL, Esq.

390 NOTRE DAME ST., MONTREAL, March 5th, 1868.

Sir:—Having substituted "Eaton's Automatic" Stove for an "Albanian," the consumption of Coal was on the coldest day this season about Thirty Pounds, which was a saving of fully two-thirds, and giving a greater degree of heat and thoroughly ventilating the room.

FREDERICK DAKUS.

C. F. HILL, Esq.

CITY SALOON, 5 PLACE D'ARMES HILL, MONTREAL, March 4th, 1868.

Sir:—I have been using "Eaton's Automatic" Stove for the past few months in my Bar, and I now certify that it has saved me in Coal at least two-thirds of the quantity consumed by an "Albanian," giving at the same time by the Regulator a more general and comfortable heat through the rooms, besides carrying off smoke and foul air, and thoroughly ventilating the place.

I am, yours, &c., &c.,

JOHN WALTERS.

C. F. HILL, Esq.

MONTREAL, March 4th, 1868.

We, the undersigned, having for some time past been using "Eaton's Automatic" Stove for burning wood, find it far superior to the common "Box" Stove, also far more economical as regards fuel, it only consuming about half of the amount used in the other Stove, at the same time throwing off a greater amount of heat; and by setting it according to the Regulator at a given temperature, we find it to remain so all day, and that by its construction it causes a thorough ventilation,—therefore we have much pleasure in granting the present certificate.

WRIGHT & BROGAN,

Notaries Public, Commissioners, &c., &c., 58 St. François Xavier Street.

C. F. HILL & CO.,

Agents for EATON'S Automatic Ventilating Stove,

58 FRANCOIS XAVIER STREET,

MONTREAL.
