

# BUILD YOUR BARN LIKE THIS!

Your cows will produce more in a sanitary stable, and your work will be cut squarely in two

### A FINE STABLE

It is a pleasure to work in a stable like this. The cows are clean and comfortable.

### STEEL STALLS ARE SANITARY

Steel Stalls do not soak up manure. When used with a cement floor you have a perfectly sanitary stable. The main cause of the spread of tuberculosis in cattle is through urine and manure. No danger with Steel Stalls.

### DON'T OBSTRUCT THE SUNLIGHT

Sunlight is the best disinfectant in the world. With Steel Stalls there are no dark corners. They allow a free movement of air and light. It is easy to keep a stable equipped with BT Stalls clean.

### COW COMFORT MEANS INCREASED PRODUCTION

A cow tied in a BT Stall and Stanchion has the maximum freedom consistent with keeping her lined up in her stall. She can card herself on almost any part of her body. Tied centrally in her stall she is free to lie down to either side. She can freely get up or down, but at the same time she is prevented from moving backward and forward in her stall, so that she can be lined up on the cattle stand and all droppings go into the gutter, not on the cattle-stand. That means clean cows.

### STEEL STALLS ARE DURABLE

When you put in BT Steel Stalls with a good cement floor you have a permanent job—no posts rotting off—no partitions breaking—no repairs to make. Isn't that worth something?

### FIRE RISK IS LESSENER

A stable equipped with steel stalls and a cement floor is not nearly as liable to take fire as a wood stable. In fact, the lower part of the barn would be almost fireproof. Should fire occur, however, cows tied in BT Stanchions can be let out in less than half the time required with chain ties.

### EASILY SET UP

In two hours you can set up 20 BT Steel Stalls, and as soon as the cement is dry your stable is ready for the cattle. Isn't that better than buying expensive lumber and posts, getting it dressed, hiring expensive carpenters and boarding them for days while they put in your stable? You can remodel your stable yourself if you use BT Steel Stalls. From our book on stable construction you get complete information as to how to lay cement floors—the best measurements for stalls and how to set them up quickly and properly.

### GET OUR BOOK ON STALLS

Steel Stalls are not all alike. Last year the Dominion and several Provincial Governments built some 20 barns in different parts of Canada, and every one of them was equipped with BT Stalls and Carriers. Why? Our book will tell you. It shows how BT Stalls lessen abortion, do away with the principal causes of big knees, ruined udders and many other injuries which cows are liable to. You will see how our individual mangers save feed—prevent overfeeding and underfeeding. You will also learn how the exclusive features on the BT Stalls mean

dollars and cents to you, by giving greater comfort and protection to your cows.

A Barn is a permanent investment—don't undertake building it without getting the latest information. Our catalogue is free. It will surprise you how little it will cost to equip your barn with BT Stalls. Fill out the coupon now and let us tell you.

### ARRANGE YOUR BARN RIGHT

At cost of over \$2,000 we have produced a book on stable construction. It tells how to build a dairy barn from start to finish. It shows how the upper structure should be built and save much money over the ordinary methods of framing. It gives the latest and best system of ventilation, which has been carefully prepared by J. H. Grisdale, Dominion Agriculturist. It gives barn plans approved by the best dairy authorities, tells how to lay cement stable floors properly. It gives proper measurements for manger, cattle-stand and gutters for any size or widths of barn. This book is free. See the coupon.

The head of one of our agricultural colleges writes us: "Your book on 'How to Build a Dairy Barn' is of inestimable value to anyone building a stable."
