Mackinlay & Son.) *Wonders of Optics and Wonders of Pompeii*, in the Illustrated Library of Wonders, 2 vols. 12mo., cloth. (New York: Chas. Scribner & Co.) *Putnam's Magazine* for March, (New York: G. P. Putnam & Co.)

FENSON'S PATENT COPYING PRESS.—Among our native manufacturers we should not omit to notice the improved copying press, patented last year by Mr. Fenson, and manufactured by Messrs. G. & C. Gurney, of Toronto, whose advertisement will be found in these pages. The old style of press was exceedingly liable to damage, if the power applied exceeded that required for taking the copy, sometimes the lower and at others the upper plate of the press yielding to the excessive pressure. Mr. Fenson with true perception has hit upon the exact remedy for this defect, and by a simple, yet efficient ratchet arrangement at the top of the screw, and a strong spiral wire spring in the cap, has effectually prevented the possibility of breakage from the application of excessive power. The moment the strain on the lever becomes too great, the spiral spring is compressed, and the ratchet liberated, allowing the handle to revolve without acting upon the screw. A glance at the engraving which accompanies Messrs. Gurney's advertisement, will, we think, fully confirm the high opinion we venture to express in relation to this invention.
