ate situation, as we see it, is certainly more prolific in bearish than in bullish the factors calculated to promote support are concerned with prospective developments rather than present conditions. The only factor in the present existing situation that we can see in favor of the market is the discount at which futures are selling, as compared with spots. To make this clearer we may point out that if during the commay point out that if during the coming season local contracts are to sell at something like a normal parity with spots in the south, 91-4 cents for October would mean comething like 8 or 81-2 cents in the south. In other words to profitably deliver cotton on October at 91-4 cents it would be necessary to buy it on some such basis in southern markets, providing our differences and markets, providing our differences and contract is correct. Supposing that it will be found correct then futures have already discounted a decline of between 3 and 4 cents in the acuthern markets. Even so, trade conditions are not encouraging, particularly on the great encouraging, particularly on the may result in a bumper yield on the present area and unless there is some very decided set-back in condition it would seem very probable that cotton will be offered freely and at substantial concessions as the new crop becomes available. The opera was staged an I rehearsed by Mr. Wiel and proved, as was expected, a musical feast. The solos throughout were beautifully rendered. The Bugville team was surely up against a rocky game;

The chances were they'd win defeat and not undying fame:

Three men were hurt and two were benched, the score stood six to four,

They had to make three hard earned runs in just two innings more.

The eighth round opened; one, two, three the enemy went down;

The Bugville boys went out the same—the captain wore a frown.

The first half of the ninth came round, two men had been put out,

When Bugville's catcher broke a thumb and could not go the route.
