

YOU CAN BANK ON THIS NAME

MR. FARMER Are you finding the Hired Help Problem getting worse every year?

The old methods were good enough for your father, but if you are to make the most of your farm, and get rid of the thousand and one aggravations that beset you, you must put in some new and up-to-date Machinery. The market is full of Farm Machinery such as it is, but it behooves you to see that you *get the best*. It will pay you to see the Willmott machine before buying, especially as they give you a better average of working and wearing qualities than any of those now on the market. Our selling plan is unique, and we will tell you more about this again. In the meantime get familiar with the name, and if you would hear more about us we will gladly send you fuller information on receipt of a post card. Our Grain Binder is a gem and can be worked easily with 2 horses, while most other Binders make hard work for 3. This point alone is worth consideration. The C. R. Willmott Co., Ltd. guarantees that every agent will carry a full line of parts for repairing, thus saving loss of time by sending to factory for them.

MR. DEALER You depend upon the Farmer. He has been a good friend to you, and he expects you to give him good, honest service. No doubt you think you have done so, but did you enquire as fully into the quality and make of that last machine you sold him? Perhaps you thought your responsibilities ended when you sold Mr. Farmer his machine, but you made a mistake if you did. Let us tell you right here, that it is your duty not to handle any machine that you cannot swear by. You can bank on the name of Willmott and we want honest, interested agents to represent us, men who will stand by us in the interests of the farmer. We want to develop business, but we value friendship more. If you are interested write us to-day for particulars of our from Factory-to-Farmer Plan, through special local agents. It will revolutionize present day methods, and the men who get in on the ground floor will never regret it. We put you in a unique position and supply you with sufficient repair stocks, you should get to know more about this. It will be worth your while.

QUESTIONS AND ANSWERS. Miscellaneous.

A MATTER OF TAXES.

Is there any process of law whereby a ratepayer, or number of ratepayers, owning land from five to fifteen acres each in an incorporated village, can be transferred into the adjoining township, when such property is situated on the boundary and has buildings thereon? The rate of taxation is said village is 244 mills, and all money is used in the central part of the village and said ratepayers are completely ignored when they ask for any favors.

Ontario.
Ans.—No.

RATEPAYER.

FARMING ON SHARES.

A and B have a farm on shares for three years. But this fall B says he is not making enough out of his farm, and now he wants A to rent it from him at an exorbitant price. A declines to pay such a rent, but B says he can get others to take it at his price, so A gives B permission to let the other parties have it. Can B compel A to do the fall plowing at A's expense? The lease does not expire till March, 1911.

OLD SUBSCRIBER.

Ontario.

Ans.—We should say that he is not in a position legally to do so.

HOW TO CURE WALNUTS.

1. Kindly tell me the name of some poultry-supply house.
2. How to cure walnuts grown in this country?
Ans.—1. Consult our advertising columns. Poultry-supply houses advertise there from time to time.
2. Leave the walnuts exposed to weather until the outer coating is black, then remove hull with the fingers, using a hammer or other tool if necessary, and store nuts away in a dry place, spreading them thinly until dry.

An illustrated description of a home-made walnut huller was published in "The Farmer's Advocate" of November 21st, 1907, page 1815.

SILLO QUESTIONS.

1. I have been told by a gentleman from Elgin County, Ont., that farmers in that section having built silos some years ago, have now discontinued using them, claiming that the food value of the corn plant is greatly lessened through the development of acid in the silage. Is it a fact that the food value of corn, alfalfa, etc., is greatly lessened by putting it in a silo?

2. If one filled a silo for summer use in the following year, would the silage be seriously injured if it were frozen for say one foot from the walls all around?
3. Is there any reason for supposing that alfalfa will not make good silage in Ontario?

Ans.—1. No; on the contrary the feeding value, and particularly the palatability and digestibility of good corn silage are distinctly greater than of corn fodder dried out, wasted and hardened, as corn fodder nearly always becomes by Christmas. Of course, a degree of acid is developed, and we do not believe it wise to feed an animal more silage than it will consume with relish, else more acid will be taken into the system than is wholesome. A certain number of silos have been built, and their use discontinued, but for every such, there are many new ones erected, and the causes of the few falling out of use is lack of proper judgment in one or more particulars, such as growing the wrong varieties, hence having green, unneared stalks to put into the silo, and taking sour, washy stuff out, and feeding this without judgment in larger quantities than the stock should consume. Another common mistake is failure to include some nitrogenous feed like bran, or clover, or alfalfa hay, to balance up the ration. Silage is all right if used right, as the experience of hundreds of men who have employed it successively for fifteen or twenty years will show. The men who know most about silage are the ones who like it best.

2. No.
3. No; on the contrary, it will, but we recommend the growing of corn for silage, and alfalfa for hay to feed with it. In case of unfavorable weather for curing either the first or second cutting of alfalfa, it may, with advantage, be ensiled.

HAWTHORN HERD OF DEEP-MILKING Shorthorns

For Sale: 2 young bulls and 10 heifers, sired by Aberdeen Here (imp.) = 2840 =. Some bred to the Lavender bull, Lavender Lorne = 68706 =. WM. GRAINGER & SON, London, Ontario.

IT PAYS

To make your stock comfortable. Any progressive dairyman will tell you that

U-BAR STANCHIONS and ACORN COW BOWLS

will earn their cost many times over by increasing the profits from your herd.

U-BAR STANCHIONS are strong, safe and easy to operate. There is no better stanchion made.

ACORN COW BOWLS are the only perfect automatic watering device. They require no float tank, and the piping may be either above or below the stall. The bowls may be placed wherever convenient. Cows immediately learn to press the disc and drink whenever they wish.

Write at once for our Free Illustrated Booklet.
