# Hot Water Heating Goods.

**THIS** is what a Customer says:

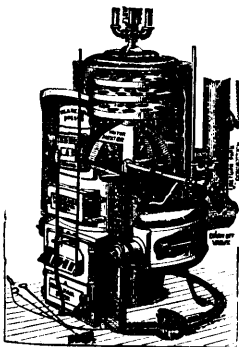

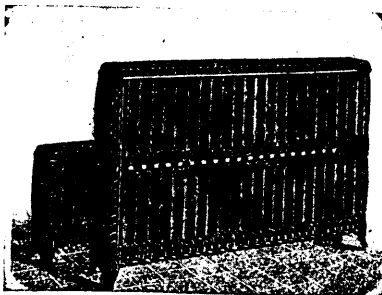

COBURG, Ont., March 10th, 1899.

MESSRS. CLARE BROS. & Co.,

Preston, Ont.

*Gentlemen,*—I bought a Preston Boiler for my house because the whole inner heating surface is exposed to the direct action of the fire, and the outer surface is utilized as a heating surface by the products of combustion being made to pass over it in its full volume. There being no horizontal surfaces to speak of, it is comparatively easy to keep clean. The water circulation is vertical, and therefore natural. The construction is simple, being complete in one casting. There are no joints requiring bolts, and, as an economical house warmer, it stands in the front rank.

Yours truly, W. R. WHITELAW.
