

Fredericton, as at the falls of the Nashwaaksis, and it is quite common on the intervalles and islands of the St. John River above this place, but I have never made any special notes regarding its occurrence. I think it likely that Mr. Matthew may be able to tell you something more about it, especially in the southern counties.

I am, Sir, &c.,

I. W. BAILEY.

*To the Editor of the Morning Chronicle:*

Sir,—In regard to Professor Lawson's enquiry about localities where the wild grape vine is found on the Atlantic coast of this part of America, I would beg to state that I have studied the botany of Prince Edward Island carefully for years and have never seen anything of this plant here.

There is apt to be a great incorrectness in the reports of unskilled observers on plants. Some species of our wild brambles which have a climbing habit, as *Rubus occidentalis*, might be mistaken for *Vitis*.

Yours,

FRANCIS BAIN,

*North River, P. E. I.*

The information so far obtained shows that the present most northerly points of the Wild Grape (*Vitis cordifolia*, or its nearly *V. riparia*) are the following:—

Annapolis Royal, Co. Annapolis.

West River, Co. Pictou.

St. John River, New Brunswick.

Isle aux Coudres, St. Lawrence River.
