

THE STRENGTH GIVING TONIC
WILSON'S INVALIDS' PORT
 quickens and strengthens the blood, imparting a healthy vigour to the system, and enabling it to resist effectually the trying changes of climate.
 It is a true scientific remedy for ANAEMIA and GENERAL DEBILITY.

SEES FALSE PARADISE, AN EARTHQUAKE'S EFFECT.

Great Indian Disturbance of 1807 Described by Prof. Walker.
 The great Indian earthquake of June 12, 1807, was the subject of Prof. Walker's address to the Natural Science Association yesterday afternoon at the university. His attention has been attracted by the peculiar wabbling movements of soda-water bottles on a table, but when he saw people running out of the building he hastened out and saw the walls rocking and a crack reaching from the roof opening and closing like the mouth of an alligator. The trees were violently shaken and the multitudes of crows had to take refuge in the air, so that there were five times as many to be seen as he thought were in existence. He felt quite assisted with his position 56 feet from any building, in an open space, heard no noises, and did not suffer from dizziness or nausea. The monsoon rains broke out two days afterwards, and the common roof of all crumbled houses were generally uninhabitable. Northeast of Calcutta, in the valley of the Brahmaputra, and in the foothills south of Bhutan the results were serious. The centre of the greatest devastation was in Assam, and a series of photographs were exhibited illustrating buildings before and after the shock. Towers were disturbed, many monuments thrown down, and church spires generally destroyed. A cylindrical tower proved stronger than the conical spires which usually snapped off at the distance from the top.

W. K. George Explains the Desire and Benefits of Protection for the Manufacturer.

At the Empire Club yesterday a letter was read from William W. Campbell, describing Toronto as "a great imperial centre," and advocating active work in the cause of imperial federation.
 W. K. George, president of the Canadian Manufacturers' Association, addressed the club on "Canadian Industries, Preference and Reciprocity."
 "Do you believe that manufacturing industries are benefited by the tariff?" he considered a superfluous question, yet very few audiences were fully aware of the important position held by manufacturers in Canada. Official figures compiled and furnished by Statistics Blue show that the output of factories employing 100 men or more amounted to \$481,953,375, while the value of all agricultural, dairying, mining, forestry and fishing products for the same year, 1900, only came to \$11,666,700. Smaller factories gave an estimated product of \$125,000,000, so that manufacturers exceeded all other products by a hundred millions. This does not include the value of the products of the roller, which is a factor in the value of the goods produced in the United States. In this respect the value of the goods produced in the United States is \$1,000,000,000, while the value of the goods produced in Canada is only \$1,000,000,000. The value of the goods produced in the United States is \$1,000,000,000, while the value of the goods produced in Canada is only \$1,000,000,000.

Construction Company Was Operating it, Horse Was Frightened and Cyclist Was Hurt.

The City of Toronto and the Dominion Printing & Contract Co. were yesterday joint applicants against a judgment for \$1200 granted to Mr. Kirk for injuries sustained in being knocked off his wheel by a horse driven by Mr. McRide, that was frightened by a roller operated by the city, and working near the corner of St. Alban's and Yonge streets last May. The amount awarded the plaintiff was not considered excessive. The point at issue is one of liability.
 Mr. Pullerton argued that the Construction Company engaged the roller from the city, and also engaged the men usually employed by the city, but that the city was not liable for the accident, because the roller was not under the control of the city at the time of the accident. The trial judge held that there was negligence on the part of the Construction Company, and that the city was liable for the accident. The judgment was granted for \$1200, with costs.
