GALE SULKY HARROW MFG. CO.

WINDSOR, CANADA.

Reasons Why Every Farmer Should Have a Gale Harrow and Seeder :

1st. FOR PULVERIZING SOIL it has no equal. By dropping frame down to the lower hole in side adjustment, it cannot turn up the sod; this is the position first time over, then raise the frame to center hole, bring the lever clear back, which sets the teeth forward in a cutting position.

2nd. FOR HARD FALLOW OR FALL PLOWING, raise the frame to upper hole in side adjustment for first time over; this will break up the crust, then drop the frame to center hole, and it will cultivate four inches deep, in a manner that cannot be equaled by any implement now in use.

3rd. FOR STUMPY, ROOTY OR STONY GROUND, drop the frame down to last or center hole; this will allow the teeth to let go without danger of breaking, and still do good work. It has no equal for rough ground.

4th. AS A FALLOW CULTIVATOR it is the best in use, as it leaves all the trash

shaken out on top, where it wits and dies out.

5th. FOR CULTIVATING CORN, remove three center teeth; for small corn, raise the frame and give the teeth as little depth as desired, and as the corn grows, drop the frame and give the teeth more depth, and throw all the earth you wish about the corn. It cultivates perfectly checked or listed corn, or any kind of vegetables planted in rows.

6th. AS A SEEDER it is the best now in use. It has a positive force feed, sows all kinds of grain, peas and flax seed, and covers perfectly as you seed.

Lastly, but not least, it is a POTATO DIGGER. Remove four teeth from each side, leaving seven teeth in the center; drop the frame clear down, bring the lever clear back, and then dig alternate rows; after picking up the potatoes cross harrow the ground and it will be left smooth and level.

This Tool combines more Desirable Features than any Harrow, Cultivator and Seeder in the Market

TESTIMONIALS :

Gale Sulky Harrow Mfg. Co., Windsor, Ont. :

DEAR SIRS,—I purchased one of your combined Harrows and have worked it on sod and summer-fallow, and must say that it does its work better than any implement I ever saw, and for getting rid of thistles it has no equal. Respectfully yours,
B. V. DEMARAY, Strathroy, Ont., July 26, 1887.

GENTS—I bought one of your Sulky Harrows and Seeders last spring, after seeing it tested in a field trial against the best Canadian implements, and as it proved itself so far superior in that trial, it did not take me long to decide which to buy. That trial was the means of putting in, as near as I can learn, over fifty Gale Harrows in this town. I believe it superior to any other implement as a harrow and seeder, and every Canadian farmer should see your machine work, as they can't help but pronounce it a success. I have used mine to sow 50 acres of oats and 40 acres of peas, that are now up and looking fine. I never had as good prospects for crops. The more I use your harrow the better I like it, and think that no farmer, who wants to do his work right, should be without one. I also prepared my fall plowing for potatoes and carrots, and can say that it did the work better and with much less labor than if I had plowed and harrowed it with my old style harrows. I can't say enough for The Gale, and will close by wishing you success.
Yours truly,
JAMES HARLEY,
Petrolia, Lambton Co., Ont.

Gale Sulky Harrow Mfg. Co., Windsor, Ont. :

GENTLEMEN—Something over two years ago we purchased two of your Combined Harrows for use on one of our farms. They have given us good satisfaction, and are the best wheel harrow we have ever used; we believe them capable of doing all that you claim for them. We are personally acquainted with the members of your company and know them to be worthy of the confidence of Canadian farmers.
HIRAM WALKER & SONS,
Walkerville, Essex Co., Ont.

I bought one of your Sulky Harrows and Seeders for \$70.00, and have tried it on very hard ground, also on sod, and can say that it surpasses anything in the shape of a harrow and cultivator, as well as broadcast seeder, that I ever saw.
T. W. BROWN,
Reeve, Sarnia Tp., Lambton Co., Sarnia, Ont.

DEAR SIRS—I bought one of your combined machines, through your company of team salesmen soon after they began to canvass this county last spring. I prepared and seeded twenty acres of new ground that was very rough and stumpy, and must say that it did the work better and with less than half labor that I could have done the work with any other implement. I also used the harrow on summer fallow where the thistles were very thick, and it did a better job than I could have done with a gang plow and ordinary harrow.
Yours truly,
WILLIAM STAMM, Petrolia, Ont.

Gale Sulky Harrow Mfg. Co., Windsor, Ont. :

GENTLEMEN—I purchased from one of your team salesmen a Gale Combined Seeder and Harrow, and have no hesitation in saying that, for getting sod in shape for seeding and for sowing and covering peas, I believe nothing could be made to work better. I used it side by side with a first-class drill (of well known make, the best in Canada) and it suited me the better of the two. I have a No. 1 iron harrow and two drills, but I prefer your combined Seeder and Harrow to any of them. In fact, I feel now that I could not get along without it.
Yours faithfully,
LEWIS WIGLE,
Essex Co., Leamington, Ont.

When your company of salesmen and teams first arrived in this county I bought one of the Harrows and Seeders, and after using it in some very trying places—hard clay sod, that had never been plowed—left a good mould two inches deep at four strokes of the harrow teeth. As a harrow and cultivator I have never seen its equal, and I am a firm believer in broadcast seeding, as done by The Gale.
HENRY BROUGHTON, Sarnia, Ont.

This is to certify that the Sulky Harrow and Seeder bought of your agent last spring, has given entire satisfaction. I have used it to harrow on sod and sow peas, and must say for The Gale that I consider it far superior to any implement now on the market, and much cheaper in the end, as it can be used for so many different kinds of work.
GEO. HARTLEY, Wyoming, Ont.

THE GALE NO. 10 HAS NO SEEDER ATTACHMENT. Is 4 1/2 feet wide, and is used for cultivating cotton, beans, or anything planted in narrow rows.
THE GALE NO. 8, COMPLETE WITH SEEDER, 5 1/2 feet wide; is done in kind of cultivating, such as summer fallow, sod ground, and, by removing three teeth, is a perfect corn cultivator.

THE GALE DOUBLE MACHINE, 13 FEET WIDE. TWO NO. 4'S OR NO. 8'S COUPLED TOGETHER. Enquiries Solicited for Descriptive Catalogue, Testimonials and List of Prices.

THE GALE NO. 4, COMPLETE WITH SEEDER, 6 1/2 feet wide, is adapted to all kinds of seeding and pulverizing.
THE GALE DOUBLE MACHINE is 11 or 13 feet wide, seeds forty acres per day. This may be used as a simple machine when desired.
