Illustrating Compressed Air Machinery, Tools, and Appliances

THE "LEYNER" DRILL SHARPENER  
 HAND SHARPENED STEEL Is Becoming a THING OF THE PAST in Most Mines  
**WHY ?**

**BECAUSE:** Leyner-sharpened steel makes the skill and the drill count.

The Leyner Sharpener is an ever-ready source of good bits.

Operating skill and superior drills are not at their best without a regular supply of properly sharpened steel.

**BECAUSE:** The Leyner Sharpener does the work uniformly, gauges perfectly, and compacts and refines the metal.

The bits are uniform, and each successive bit made is equal in drilling capacity.

The Leyner Sharpener shanks as well as sharpens and can be applied to light forging jobs.

*Let us send you Bulletin 4122.  
 It contains a lot of useful information  
 on Sharpening and Sharpeners.*
