### Household Notes.

Whitewash is an excellent purifier. Always start coffee with cold water. Lemon juice improves a whitewash salad. Sopsends is an excellent tonic for rose bushes. Lemon juice will improve the flavor of stewed figs. Small new potatoes and peas make a good soup. Keep on hand a small brush for washing vegetables.

Egg and milk dishes should be baked in a slow oven. Too much care cannot be taken in selecting babies' shoes. The clean hairbrush makes the hair bright and glossy. Icing made with brown sugar has a delicious nutty flavor. All meat pots can be rendered and put into the soap fat. Add a cupful of strawberry jam to muffin batter. Delicious. Steamed strawberry dumplings are excellent served hot with cream.

### Dominion Steel Co.

Will Use Only 270,000 Tons Wabana Ore—Scots Does Not Require Any. We copy the following interesting item from the North Sydney Herald of Saturday, June 11:

The Dominion Iron and Steel Co. are expected to bring in about 270,000 tons of iron ore from the Wabana mines this summer.

The company has been operating only one blast furnace at the Sydney plant for some months, but a second furnace is expected to be blown in shortly. Each furnace when in operation requires from fifteen to eighteen thousand tons of ore per month. Figuring on one furnace working steadily during the year, and the second in operation for the remaining six months of the year, the amount of ore required would be approximately 270,000 tons. There is some ore in stock at the Sydney plant at present, but it is possible the company may decide to largely increase their stock pile, and in this event, the tonnage of ore to be brought in would reach a figure considerably larger than the one mentioned above. The Scotia Co. has sufficient ore in stock here to keep one blast furnace in continuous operation for eight or nine months' time, and there is little likelihood of any more ore being stocked here under the present industrial conditions.

At the present time both the Scotia and Dominion Steel Co. are working their respective mines, but operations are being carried on at a reduced scale. This condition will likely continue until next spring, when it is hoped that the steel trade will have so far recovered from its present slump as to warrant both mines being operated to capacity.

### Exciting Cricket.

Spencer Lodge Loses to Field Hall.

A cricket match of more than ordinary interest was played on Friday afternoon between teams from Field Hall and Spencer Lodge, the former captained by Miss A. M. Richards, P.A., and the latter by R. Arkile (Grand Falls). The game was exceedingly exciting and the spectators were unable to keep their enthusiasm under proper control, and loudly encouraged the respective teams. Field Hall batted first and lost several wickets without obtaining any runs. The fall, however, did very well and rolled up an excellent total. Spencer Lodge showed signs of doing well at first, and before their second wicket had fallen, had attained a score of only 30 runs behind their opponents total. Field Hall then essayed a change of bowlers who sent down some weird "googlies" which caused collapse of the ladies' team, the last wicket falling amidst breathless excitement. Field Hall batted left-handed throughout.

### Careless Sprinkling.

The youthful—and other Aquarii who handle the watering hoses in flushing the pavement in front of the various stores, are requested to be a little less free with their water. Pedestrians have certain rights left yet, and it may be that some morning one or more proprietors may have to undergo an action at law for careless collapse of the ladies' team, the last wicket falling amidst breathless excitement. Field Hall batted left-handed throughout.

### Outport Rugger.

A rugger game was played recently on the Bishop Field College grounds between two teams representing various outports. Despite the fact that several players had never seen the game before, the contest was better than could possibly have been expected. Port Union was not amongst the outports represented, and the Minister of Marine and Fisheries was not even consulted in the matter of representatives from his district.

### Express Passengers.

The express which left Port aux Basques yesterday after the arrival of s.s. Kyle, reached town early this afternoon, bringing the following passengers: H. and Mrs. Crawford, Mrs. M. Lemmon, Miss J. Milfin, C. B. Whelan, Y. Alba, E. Brine, A. B. Gunn, A. B. Harding, Miss S. F. Crowley, Mrs. H. E. Whitworth, F. H. and Mrs. White, C. Huld, E. H. Mighel, J. Cook, J. Foster, S. G. Miller, J. J. Duser, Miss A. Noseworthy, Mrs. J. Pittman and son, Mrs. J. Hodder, J. M. Baird, Mrs. L. Yeargherg, Mrs. A. Pope.

### Kirk Men's Association.

Professor Kent, D.D. will deliver an address to the members of the above Association in the Presbyterian Hall to-night at 9 o'clock. A social evening has been planned by the Executive and after the address refreshments will be served by the ladies.

### Steering by Sound.

Unusual interest has been aroused by the working of the "radio" pilot-cable laid at the bottom of the Channel leading to Portsmouth, which enables fog-bound vessels to steer an accurate course into the harbour by means of sound.

This cable, which is about twenty miles long, is laid from the entrance to Portsmouth Harbour to the Warner Light on the Channel side of the Isle of Wight. It is beneath the exact course to be followed by vessels, and its "free" end is out at sea. The high-frequency electric current in the cable emits a certain "note" in Morse code.

The navigating officer on board a ship wears a set of ordinary wireless telephone receivers. These are connected to a battery, a set of "amplifiers" similar to those used in wireless telephony, and two coils, the latter being hung one over each side of the vessel, above the water line.

When approaching the harbour the officer listens first through one coil and then through the other for the "note" of the guiding cable. It may come to him through the starboard coil; if so he knows his vessel is to the left of the cable.

As soon as he knows the "note" equally loud through both port and starboard coils, he knows that his ship is directly above the cable, and in the correct channel.

### Oil the Streets.

Dear Sir.—Might I suggest through your columns, to the City Council that they lay the dust on Military Road and Queen's Road with oil. The water used on these important thoroughfares is entirely inadequate to serve the purpose for which it is intended and in fact, oil is the only really satisfactory dust layer.

Yours faithfully,  
PRO BONO VIARUM.

# Westinghouse

ELECTRICAL APPARATUS FOR EVERY PURPOSE

### Westinghouse Glue Pots and Solder Pots

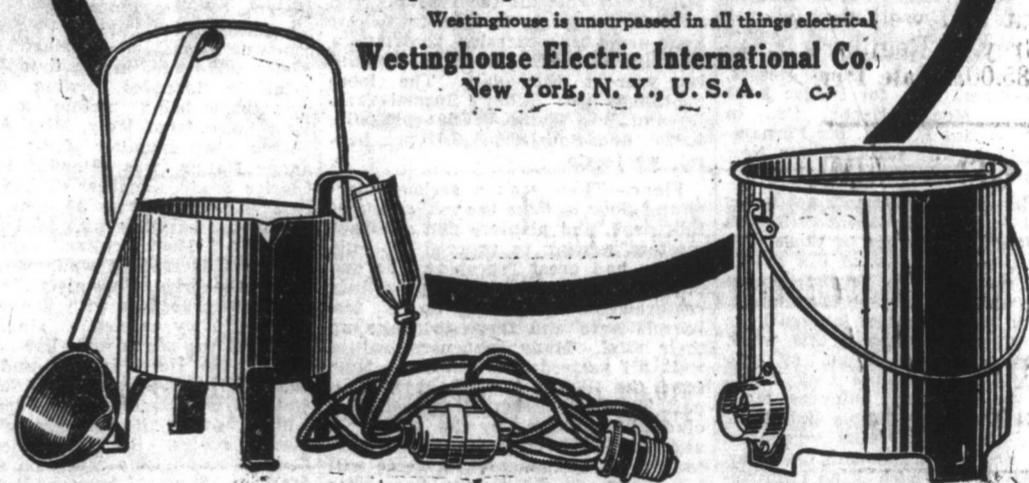

The great advantage of Westinghouse electrically heated glue pots over the old wet-type pots is so obvious that industrial establishments the world over are rapidly installing them.

Westinghouse electrically heated glue pots are easily connected and started; they quickly bring the glue to the right temperature and keep it there without attention; they cannot burn the glue; they save time, attention and labor.

For melting solder, lead, tin, babbitt and similar metals, Westinghouse electric solder pots are unequalled. They are safe and economical, and by keeping the metal in an even molten state assure a strong joint.

Westinghouse electric glue pots and soldering pots are built with characteristic Westinghouse workmanship. Like all Westinghouse products they are ruggedly made and will stand rough handling.

Westinghouse is unsurpassed in all things electrical.

### "Hobson's Choice."

There is a romance of success in the story of the origin of the popular catch-phrase, "Hobson's choice."

Towards the end of the seventeenth century there lived at Cambridge, Tobias Hobson, a carrier. He was the first man in this country to let out hackney horses.

Hobson noticed how fond the students were of riding, and, starting in a small way, he ultimately established a large stable of horses with boots, bridles, and whips.

His horses were always ready and fit for riding, and he treated every customer alike. When one called for a horse he was conducted to the stable.

But although there was a great choice of horses, Hobson always asked the customer to take the animal standing next to the stable door. Hence it became a saying, when something was forced upon you which you would not have chosen yourself, that it was Hobson's choice.

### Trees That Cause Fires.

Can a forest be fired through the rubbing together of tree branches in a gale?

So many doubts have arisen on the point that a well known naturalist has tried to settle the question once and for all.

He has come to the conclusion that the friction of branches against each other can start a fire.

It is not claimed that this extraordinary event occurs in our own damp climate, but there is evidence that it does occur in some of those regions where the air is dry and the sun scorching.

In the immense bamboo jungles of

India and South-Eastern Asia it is felt to be a certainty by travellers that the extremely hard outer covering of the tall growths are capable of striking fire.

May not this have led to primitive man discovering how to make fire by artificial means?

Be that as it may, there is no doubt that ignition by tree branches rubbing briskly against one another in a very dry, hot climate explains many a supposed mysterious forest fire.

### Prepare to Perspire.

The average man is more or less physically inactive during the winter. The result is that poisons accumulate in his body. That is why there is much illness in the spring and a vast consumption of "spring medicine."

But there is something far more efficient and beneficial. That because it is natural, "something" is perspiration. The perspiration ducts are the appointed channels by which the winter-accumulated poisons in the system should be expelled.

So perspire and perspire profusely and productively. In other words, go and dig. That's perspiration and productive. It will stir your whole system up—muscles, heart, mind, liver, lungs, everything. Spring digging means summer production, and as the drops fall from your brow with them comes the poison. A cheap and effective expulsion!

"Perspire with care," though. Have a warm overcoat to put on when you have finished. Walk home briskly, and slip into a warm bath. A tablespoonful of vinegar in the water will banish all aches from your muscles, and you will be clean inside and out!

Nature has more than one sweet restorer. Sleep may come first, but perspiration is a close second.

### NOTICE.

Notice is hereby given that Gorn Constantinesco, of the Hibernian Engineering Works, Honey-Pot Lane, Alpertown, in the County of Middlesex, England, Engineer, and Walker Haddon of 122 Salisbury Square, Fleet Street, London, E.C., England, Proprietors of the Newfoundland Patent No. 223 of 1910 for "Method and means for transmitting power by wave transmission through liquids," are prepared to bring the said invention into operation in this Colony and to license the right of using the same on reasonable terms or to sell the same.

Dated the 7th day of June, A.D. 1921.

One Building, Prescott Street, P. O. Box 239, City. jnc8,12,15,18,21

### There Must Be a Reason

That a great many of the garments that we have received in the past month were from new customers who had those garments mishandled by other dyers and were sent to us as a last resort before a settlement was made with the owners. We were able to doctor up the majority of those crippled garments to the entire satisfaction of those owners. If you have any sick garments of this character send them to us. If our customers don't accept the garments after we doctor them, don't pay us. No cure no pay. We have received a new shipment of dye, the best on the market. Re-dye, cleaned, and dyed at shortest notice. Outport orders get my personal attention.
