

# Barrett Specification Roofs

## On the "Concrete City."

IN the illustration below, the Turner Construction Company of New York, has brought together in a scale drawing an accurate representation of most of the important modern concrete buildings which they have erected during the past nine years, at an approximate cost of \$12,000,000.

It is an imposing display of best types of modern construction—"a concrete city" indeed—scientifically designed for maximum service at minimum cost and minimum maintenance.

It is significant that 95 per cent. of the entire roof area is covered with the Barrett Specification type of roofing. The figures are as follows:

Barrett Specification type of roofs.....	1,490,523 sq. feet
Plastic Roofings.....	14,714 sq. feet
Slate Roofings.....	21,640 sq. feet
Tile Roofings.....	5,619 sq. feet
Ready Roofings.....	38,381 sq. feet
Copper Roofings.....	6,355 sq. feet
All other kinds.....	7,448 sq. feet

It is important to remember that while all these buildings were constructed by the Turner Construction Company, the specifications were drawn by a large number of architects and engineers.

Barrett Specification Roofs were almost unanimously selected for one reason only, namely that they would give *better service at lower cost*, than any other roof covering.

Barrett Specification Roofs require no painting or similar attention—in other words, there are no maintenance costs. They will last upwards of 20 years without any care.

The superior economy of Barrett Specification Roofs justifies their adoption not only on big first-class concrete buildings, but on every flat roofed building from a tenement to a skyscraper—from a small mill to a modern manufacturing plant costing millions. But be sure it's a real Barrett Specification Roof. The only way to be sure is to incorporate The Barrett Specification in full in your plans.
