

Why hens go on a strike!

The feed elements that make *whites* of eggs are entirely different from those that make *yolks*. When hens aren't fed both the *white* and *yolk* making elements, they *can't* lay.

Missouri Experiment Station tests prove that 100 lbs. of wheat, corn, oats, barley and kaffir corn make (above bodily maintenance) an average of 224 yolks to 154 whites. Based on data from the same experiments, Purina formulas produce, (above bodily maintenance), as follows:

Purina Scratch Feed	247.49 yolks	142.11 whites
Purina Chicken Chowder	182.05 yolks	282.55 whites
Combined Ration	429.54 yolks	424.66 whites

These Purina feeds not only make a practically *equal* number of whites and yolks but *more* of both than ordinary feeds.

Note that Purina Chicken Chowder contains the necessary white-forming elements to balance up the yolk-making grain ration. That's why it makes hens lay so heavily. Instead of the yolks being absorbed by the hen's system, Purina Chicken Chowder makes the whites to *complete* the eggs and they are laid. Thus we can absolutely guarantee

- more eggs or money back

on Purina Chicken Chowder if fed with Purina Scratch Feed as directed. You take no risk.

Ask your dealer or write the Chisholm Milling Co., Ltd., Toronto
"There's a Purina Feed for every need."

Easy to Operate

equipped with plain or fin cast or steel shares, 8, 9 and 10 inches wide.

In examining the above illustration carefully you will note that it is an ordinary Walking Plow with a Sulky Frame attached. There is a land wheel and a rear wheel to carry the weight of the driver, and a land beam wheel to arrange the DEPTH OF THE FURROW AND A FURROW DISC TO GAUGE THE WIDTH. You will also note the beam used in this plow is the ordinary length for Walking Plows, and the draft attachments are arranged so that the whiffletrees are immediately attached to the end of the beam, thereby assuring lightness of draft. Why not have full particulars by writing for catalogue to-day!

Tudhope-Anderson SULKY PLOW

The Simplicity of a MAXWELL is Due to Special Steels

A MAXWELL is a simple car. Its engine, axles, clutch, transmission and gears are the utmost in simplicity, which is the goal of scientific engineering.

Special steels have made this possible. They are steels made to Maxwell's own formulae, the result of thousands of tests and years of analysis.

These steels give a Maxwell the remarkable combination of extra strength and lightness in weight.

In this way complicated construction has been avoided. Simple design has naturally followed and to this simplicity rare strength has been added by the use of these special steels.

Strains, twists, thrusts, shocks and blows are protected against in many other cars by reinforcements, extra weight in metals used, and a design that obviously is anything but simple.

In a Maxwell this simplicity has made the car easier to build, and it therefore is better built, easier to drive, and easier to care for.

That this should win friends for Maxwell is almost too obvious to call attention to.

Nearly 400,000 persons now drive a Maxwell, which is a very definite endorsement.
