

ing up. **MONEY TO LOAN ON REAL ESTATE**—

AT A LOW LEVEL

The Camp's Output for the Week was Only 180 Tons.

List of Working Mines is Now Reduced to Five.

The output of ore from the Roseland camp for the week ending last night would be ridiculous to contemplate if it were not painful.

That the entire tonnage of Roseland's great mines, properties that have made Canada known in the eyes of the world, should be represented by three figures is an object lesson on the effects of labor troubles that cannot fail to impress the most prejudiced spectator.

The principal producer for the week was the Iron Mask, whose output weighed cars averaging 20 tons each, or 180 tons. This was swelled by a carload shipped from the Spitzsee, making the total for the week 180 tons.

Not a pound of ore was shipped. Northport and the shipments to Trail are so insignificant beside the 120 tons, which is the normal product of Roseland's mines, that comparison is futile. It is even conceivable that the camp's output should vanish altogether, but the probability is that smaller properties will continue to ship small quantities of ore weekly.

The working mines in the camp were reduced by one during the week through the trouble at the New Elmo. Up to the present time no special effort has been made to get the work started there and it is extremely improbable that the management will resume operations until such time as they are able to have their development work performed for less than ten per day for each of the men engaged.

THE OUTPUT.

The output for the week ending August 3rd and for the year to date are as follows:

	Week.	Year.
Le Roi	107
Le Roi No. 2	20
Centre Star	54
War Eagle	20
Roseland G. W.	8
Iron Mask	180
Homestake	2
I. X. L.	20
Spitzsee	20
Monte Cristo	21
Velvet	21
Evening Star	21
Giant	21
Portland	21
Totals	180 215

The mining review for the week ended is necessarily briefer than the previous week, for one work mine is omitted throughout the period and another closed down last night will be seen from another column.

The working mines in the Roseland camp are the Green Mountain, Spitzsee, Iron Mask, Velvet, I. X. L. and the Evening Star. The Homestake is dropped at the last, and the trouble at the New Elmo has removed it from the list of operating properties.

Green Mountain.—The work at Green Mountain is principally confined to the double compartment system, which it is proposed to sink for a considerable distance, drifting from various levels as the work progresses. At present twenty men are employed on the property, and the work is progressing at a good rate. The principal shareholders of the mine were in the city during the week and were delighted with the showing at the mine.

Velvet.—Work is proceeding at Velvet as usual, but the management refuses to give any information as to the nature of the operations or progress made.

Iron Mask.—The work at the Iron Mask has gone ahead most satisfactorily during the week. The property has achieved the distinction of being Roseland's heaviest producer at the present juncture, and the work will be continued for an indefinite period. The report was current that the mine was to close down, but this is a phatically denied by Manager Sam Hall. Stopping has been under way for the 350, 400 and 450 levels with no results. The ore shoot on the 450 level is opening up especially well.

Spitzsee.—Stopping has been in way all week at the Spitzsee and the quality of ore is being extracted from the drift on the 50-foot level is unusually stopping ground. Another shipment will be made to Trail this week.

Big Four.—Work on this property progressing along the usual lines. Shifts are at work on the No. 1 and it is expected that the pay-off may be encountered almost daily. Management is well satisfied with results attained.

I. X. L.—The work at the mine during the week has been of routine nature. The stopping on the second and fourth levels has been continued. The amount of ore available for shipping has been substantially increased. Two cars of ore are now at the mine.

THE BOUNDARY OUTPUT.

The following table gives the shipments of Phoenix branch and Boundary mines for the past week and for 1901:

	Week	1901
Old Ironsides, Knob	497
Hill and Victoria	125
B. C. Mine
Athelstan
Snowshoe	80
B. Bell
Totals, tons	6932
Mother Lode, Deadwood 211

Other Boundary mines .. 500

Grand Totals, tons .. 8144 207,820

During the month of July the shipments were from the B. C. mine were 5,135 tons.

Next Saturday is apy day in this camp, when about \$40,000 will be distributed for miners' wages.

Last Tuesday the B. C. mine began shipping to the Mother Lode smelter, at Greenwood, for the first time.

During the month of July there were 12 cars of ore shipped from the R. Bell mine, in Summit camp, to the Granby smelter.

A strike of very rich copper ore is reported to have been made in the Winnipeg recently, at the 300-foot level. The report has not yet been confirmed.—Phoenix Pioneer.

GRAND FORKS, Aug. 3.—During the week ended today the Granby smelter treated 4,545 tons of ore. Total treated to date, 192,415.

ROBBERS AT SIRDAR.

A Poker Party Bluffed by Two Men With Guns.

The Sirdar hotel, at Sirdar, was the scene of a very daring holdup on Sunday evening in which two men in masks and armed with guns played a very prominent part. Nothing whatever is known of the robbers save that they made a good haul and got clean away.

The Sirdar hotel is owned by J. J. Bonnie, and at about 11 o'clock on Sunday night, while a poker game was in progress, a masked man entered by the front door and another by the side door so that no one could leave the building. The newcomers wore red masks and each was supplied with a six-shooter. There were seven men sitting around the table at the time, and these they once commanded to throw up their hands, an order which was generally obeyed without question. To facilitate their work one of the masked men then commanded the victims to line up around the room and while one kept the party covered the other proceeded to see what there was of value in their clothes. All told the robbers are said to have secured about \$200 in cash as well as a number of watches. One of the men went behind the bar and appropriated a rifle and shotgun, which were behind the counter, as well as a box of cigars and such change as there was in the till at the time.

They then commanded their victims to remain where they were until they could get away, threatening to shoot anyone who tried to follow them or seek to find out which way they would go. Not wishing to take any chance of being filled with lead the victims obeyed and in a few minutes the robbers were out of sight and well on their way to parts unknown. It is thought that the men who performed the trick were familiar with their surroundings.

AT DEATH'S DOOR.—

Word was received here yesterday from Spokane to the effect that Jess Spellman of the Roseland saloon, who was sent to Spokane last week to be treated for the throat affection from which he recovered as at death's door and that he had but a few hours to live. A later report stated that he had somewhat improved.

LOTS OF CEMENT.—

The West Kootenay Power & Light company is engaged in constructing at the Bonnington Falls power house a building for the storage of the cement purchased to be used in connection with the extension of the plant. Up to date 1,000 barrels have arrived and are packed away. Another 2,000 barrels have yet to arrive. They found the few carpenters engaged in the contract the company's wage roll is down strictly to the operating force.

TO CHINA CREEK.—

The St. Andrew's Sunday school picnic to China creek yesterday was most largely attended affair of the kind in the season. The special train leaving the C. P. R. depot at 9 o'clock took 180 passengers to the scene of the day's outing at China creek, and the regular train, an extra locomotive being put on to handle the additional load. The children and others take advantage of the holiday spent an enjoyable day.

ANOTHER HOIST.—

The application of the city for a rate from the Dominion government on account of the expense incurred by this city in connection with the break of smallpox last year has received another hoist. A communication has been received from the department of agriculture, in whose jurisdiction matter rests, stating that the minister would like the capital shortly to receive the request would be brought his attention at the earliest possible moment.

DOG AND ALL.—

Colonel and Mrs. Jackson left today for Ottawa, from whom they departed their dog Carro, from whom the dog declined to part even when a transportation journey was in contemplation. The uniform case containing the dog garments presented to the governor of South Africa by the Governor General was a prominent feature in the worthy couple's baggage, and Colonel doubtless figures on the eyes of Ottawa's parade tour dressed with his dressy parade tour. Colonel Jackson has long been a law-abiding citizen will join the Militia and the hope that the balance of his journey may be spent among peaceful lands. He was a typical African, good-tempered ever and shrewd with a harmless mania for shunning the public eye that did no one's good and gave many a hearty laugh.

A MANTEL CLOCK, IMITATION MARBLE, ENAMELLED, HALF CATHEDRAL GONG STRIKE, AS A PREMIUM TO THE OWNERS OF "BOBS" CHEWING TOBACCO IN EXCHANGE FOR SNOOT TAGS WOULD BE AN ORNAMENT IN A MILLIONAIRE'S HOUSE. YET FOR OUR ILLUSTRATED CIGARETTE SAVE WHICH WE SEND GRATIS.

THE EMPIRE TOBACCO CO. LIMITED. WINNIPEG BRANCH.

THE WATER SUPPLY

NO PRESENT DANGER OF A SHORTAGE FOUND BY THE ENGINEER.

LAWN SPRINKLERS AND OPEN TAPS MAY HAVE TO BE LOOKED TO.

The question of water supply in Roseland is a matter that is worthy of the consideration of residents at this juncture. It is proverbial that "a stitch in time saves nine" and it is now that water consumers should guard against any possible contingency that may result in a shortage during the next month.

At the present moment there is no danger of the water supply failing. This statement is made on the authority of the city engineer, who went over the water system yesterday and examined the situation thoroughly. In fact the city is in better shape, so far as its water supply is concerned, than it was at this time last year. Under these conditions there is every reason to feel that no danger may be apprehended as the city got through the dry season of 1900 without requiring the curtailment of consumption in any direction. In the absence of records in this respect, however, to predict the possibilities of the next few weeks. There is no data to show what conditions have prevailed in years other than 1900 and it is possible that continued drought for three weeks or a month may reduce the supplies supplying the reservoir to such a degree that the supply may be endangered. To guard against such contingency consumers should avoid wasting water.

One of the principal directions in which water is wasted at this season is through lawn services. The regulations of the water department strictly enjoin citizens from using lawn hose more than two hours per day. It is admitted that this regulation is not honored in the breach than in the observance and the attention of the water department has been directed to lawn services as a great waste of water. If water saving can be made, Unlimited exercise is exercised in this matter and no order will be issued forbidding the use of sprinklers altogether. Such a proceeding would be a handicap to many citizens who have spent time and money in making their lawns attractive but when the interests of the city are really at stake, other considerations take a back seat. Meantime lawn-owners can help matters materially by observing the regulations to the hour rigidly, and if they fail to do this no one else will be open to censure other than the consumers themselves.

Many consumers make a practice of permitting taps to run all night. In this way many thousands of gallons of water are literally wasted every night. It is a very twenty-four hour course of the department, which are framed in the interests of the community generally. In an emergency it may be necessary to shut off the supply altogether for four or five hours; even at night, making provision, of course, for the prompt turning on of the water in the event of a fire alarm. This course only to be adopted in extreme, and not serious, considered under extraordinary circumstances. By cutting off all water the dam and reservoirs will have a chance to fill up in even though their contents being seriously depleted during the day. At present the tanks are, fortunately, full and overflowing.

It is a fact of some interest that consumption of water has not decreased noticeably during the last month despite the fact that fully 1,000 people have left the city. Just as much water passes through the reservoirs as now as was the case when the people who have gone were here, and the feature of the water supply which furnishes food for thought. Does it indicate that a very considerable percentage of the water supplied is wasted? In view of the fact that the people in aggregate consumption of water theory would appear to account for the figures.

Pending a possible shortage in the water supply, citizens should prepare a measure of reasonable economy in using water from the city mains.

COAL AND OIL.

Operations on the North Fork of Kettle River.

Reports from Grand Forks are to effect that the principal interest centres about the coal discoveries of the north fork of the Kettle river and oil boring on Ward's ranch.

Samples of the coal from the measures on the north fork have been brought into the city and tested. It has been demonstrated that the product is a first class coking article, with 10 per cent of fixed carbon. A considerable amount of land has been located in coal fields section by a Grand syndicate headed by George Fraser and it is proposed to commence development on an extensive scale to demonstrate the extent of the coal measures. Information available touching the resources of the north fork counts minerals, agriculture and coal have placed before the Mackenzie-Marmora people with a view to inducing them to take up the charter for a railroad to the north fork, the charter for which is now controlled by Grand Forks.

The boring for oil on the Ward ranch has been temporarily suspended pending the installation of a steam plant, which it will be possible to reach a depth of 1000 feet if necessary. A section of country claimed to contain oil has been thoroughly examined by a number of experts recently and all agree that the indications are of first class. A lake near which the oil is being carried on is noted for amount of petroleum found floating its surface.

John McArthur of the Hotel saloon, leaves this morning for

PARK AND CEMETERY

PROPOSED PLANS REQUIRE A RE-ARRANGEMENT OF THE LATTER.

OTHER MATTERS THAT RECEIVED ATTENTION OF THE COUNCIL.

The city of Roseland, may have to part with a section of the city cemetery if the projected driving and athletic park is to be accomplished. This statement was made to the city council last night by Chairman Clute, who informed the aldermen that the city engineer had prepared plans of the ground and come to the conclusion that a slice of the cemetery was necessary to the consummation of the park scheme. Chairman Clute remarked that the cemetery proper would not be materially interfered with, and that it would be an easy matter to add an equal area at another point to preserve the area and symmetry of the burying grounds as at present plotted. None of the aldermen offered any objection to the proposition, and the step will be considered as conceded in preparing the plans for the park improvements. A plan covering the proposed changes will be submitted to the council before decided action is taken in the matter.

Alderman Clute occupied the chair at last night's regular meeting of the council in the absence of Mayor Lalonde, who went as far as Kootenay Landing with Mrs. Lalonde and family, who are en route to Quebec. The other aldermen present were Messrs. MacKenzie, McDonald and Armstrong.

The only other matter of any general interest to be discussed was in connection with the disposition of waste matter from the Lion brewery. The chair has been made that this waste matter has collected in a swampy spot near the brewery and gives rise to odors that are decidedly objectionable to the residents of the section of the city. The management of the industry was asked to take action and requested the council to point out what means of remedying the matter would be satisfactory. The city engineer reported that the nuisance could be adjusted if the waste was conducted to the city sewage system, or the means of purifiers used on the ground. The brewing company objected to the scheme of connecting with the sewer, because of the heavy expense attached thereto, and in view of this the council passed a resolution requiring the company to construct a proper system of screens and filters to handle the matter at the brewery. The company will notify the effect.

The committee reports were remarkable for their brevity. No recommendation were made to the council outside of routine accounts, as follows: Finance committee \$17.70, board of works \$308, fire water and light \$236.90. All were passed without discussion.

Alexander Robinson, superintendent of education, forwarded the council a similar letter to that received by the school trustees, informing the aldermen that "as the department has decided to take no further steps toward the erection of a school building in Roseland during the present summer."

A petition was received from interested citizens requesting the council to close an eight-foot walk on Spokane street south of Kootenay avenue and a walk on Cook avenue from Spokane street to Washington street. This was referred to the board of works.

LEAVES TODAY.

The secretary of the school board, J. McCanney, was notified by J. H. Truett yesterday that Hon. J. D. Prentice, legislator of education, had postponed his departure to Roseland until today. He will bring him into the city on Friday night.

DEER PARK BALL.

A grand ball was held in the pavilion at Deer Park on Saturday evening the 3rd inst., commencing at 8:30. The orchestra consisted of four pipe bands, and the delightful music was much enjoyed by the dancers. The hall was nicely filled by the campers and residents of the Park. The game was varied and lengthy, and even the extras were all well patronized. Refreshments were served until 11:30 p.m., after which the dance continued and all the people dispersed to several places in the city well satisfied with their evening's pastime. It is the intention of the campers to continue these entertainments here during the camping season. Among the Roselanders present were Mr. and Mrs. C. Lockhart and Miss Lockhart, Mr. Aileen Bennett, Mr. and Mrs. McQueen and Mrs. W. F. McCall. Others present were Messrs. O. Hamlin, Bell, Houghton, Evered, Alexander, Mrs. Hayhurst, Doughton and Mrs. Alexander, of Deer Park; also Miss Nunelly of Sour and Miss Parker of Spokane.

MIGHT BE WORSE.

The representative of a financial agency, whose business it is to look out on prevailing conditions in the circles, states that Roslanders might get a lot worse in matters than they are at the present time. The news men apparently had some contingency as the strike in mining some time previous to the declaration of hostilities, and had reduced stocks in most instances to reasonable proportions, besides arranging credits in such a manner that a short of a long continued cessation of activity will materially affect the business houses. Touching on the conditions in Phoenix, the same gentleman remarked that the reports from there were anything but bright. The situation was severe and merchants shaved down prices until it was difficult to make profits. In addition, a number of parties who were dining rooms and restaurants do at the end of July, an estimated amount lost in this way is the figures at \$3,000.

SATISFACTORY RESULTS OF A
TWELVE-DAY RUN AT
THE MILL.
A HANDSOME YIELD IN BULLION
AND CONCENTRATES
SHOWN.

A handsome gold brick is on exhibition at Spring's jewellery store today, the product of a twelve-day run at the Onondaga mine on Champion creek, owned by the Messrs. Will of Syracuse, N.Y., and St. Louis, Mo., and managed by Thomas James, who is now in the city. The brick weighs over ten pounds and contains \$2000 worth of bullion. The concentrates saved from the run are valued at \$1000, making a very neat clean-up under the circumstances.

The ore treated during the twelve-day run referred to was literally quarried from the surface of the Yellow Jacket claim, which with the Maud S. comprises the principal portion of the property operated by the Onondaga company. The conditions attending the operation of the Yellow Jacket claim are such that it can only be worked at depth by a tunnel through the Maud S., now under way. Meantime the ore is being taken from the outcrop on the claim and put through the mill to ascertain some idea of the values to be obtained.

Referring to the run, Mr. James says: "We took dirt, gravel, waste and rock as it was blasted out of the hillside and wheeled everything to the mill. The stamps had to be stopped occasionally to extract the roots that went in with the other material, so you will have an idea of the complete absence of sorting. This was done with a reason, of course, and the outcome is more gratifying to the company than would be a test made with bigger results from carefully sorted ore. We now have some idea of what is to be expected from the claim, and estimate that the ore will average throughout \$20 in assay values. On the basis the ore will net \$17 after treatment. We are taking a test run on the Maud S. for a test run, and already have 400 big sacks ready for milling. The test run probably be commenced these weeks hence."

"The failure of Camp and Iron creeks, which supplied the mill with water, he compelled us to shut down the mill now such time as the creeks are replenished. We expect that rain cannot be deferred much longer, and hope to have the plant in operation shortly. In the interim the development of the mine is proceeding without cessation. The Maud S. vein, three to ten feet in width, with an average of a 250-foot crosscut, with drifts in either direction on the ore for a considerable distance. The crosscut is being continued to reach the Yellow Jacket lead, which it will tap at a depth of 100 to 200 feet. Meantime the Yellow Jacket is being worked from the surface."

The Messrs. Will are expected to be in the city this month.

MORGAN A MINING CENTRE.
Very little has been heard in Roswell of the First Thoburn mine, which the best developed property anywhere near the line of the railway now under construction by Jim Hill from Marquette to Republic via Grand Forks. It is owned by a syndicate of Nelson, headed by Pat Burns, Blake Will, Bruce White of the Slocan State, and other equally well known mining men. It has so far been producing at about 1900 feet of working, showing a lead of 26 feet, averaging nearly \$30 per ton. A shipment of sorted ore of quarter returned \$70 per ton. The quantity of ore in sight is estimated at \$1,000,000. Morgan, the new town on the Kettle River Valley railway, is shipping and supply point for the property as well as for the Ketchikan, Pierre Lake and Elk Creek districts. The distance from the First Thoburn mine to Morgan is about a mile and a half.

COLUMBIA NOTES.
Plenty of Freight Moving—Fine to the Valley Crops.
COLUMBIA, B.C., Aug. 6.—The more freight being handled out of station here now than there has been since the Columbia & Western commenced to land freight here. Saturday last there were forty horse teams working out, mostly points between Nelson, Wash., and public work for the different contractors along the line of construction of the Columbia & Western. The daily appearance these days, and will be still more lively when they commence to throw dirt on the banks from here to Phoenix, which will amount to a week's time.
Messrs. Turner, Boston & Co.'s representative from Nelson was in business amongst the merchants here Friday last.
Last evening's express from the west was delayed at this station 25 minutes by the derailing of three freight cars, which had run off an open switch engine on the freight had kicked back, and owing to a creek bridge couldn't be chucked to the north end of the switch. No idea was done to either cars or track.
The farmers in this vicinity are the largest crop of grain and hay crops have had for years, the hay especially being an extra heavy crop.
The city is making good headway with the laying of the water main. Mr. George Chapell has the contract and has a large force of men at work. They are laying a four-inch main making 3-4-inch connections from main.
Mr. W. Wastell, who has been in Seattle for the past two months, turned home by last evening's express. The Republic mine is hauling a wagon to this point and shipping to the C. P. R. to Trail are valued at \$5000 per ton.
Mrs. J. P. Rain, stenographer for townsite company, arrived from Seattle last evening, where she spent her vacation days.
E. Spraggett is opening up real estate and brokerage office here, and will be taking a jump here very many real estate offices are open.

STRENGTH AND ACTIVITY DISPLAYED BY WINNIPEG ON 'CHANGE	
RAMBLER-CARIBOO AND CENTRE STAR DROP OFF A FEW POINTS.	
The opening days of the week found considerable activity among stocks on the local market, due largely to the demand from the outside. Later on came somewhat of midsummer dullness and a drop in the extent of business. The total sales for the week was not very large.	
Most noticeable for activity has been Winnipeg, trading in which was stimulated by reports of a good showing of ore having been struck in the mine. Particulars as to this have not been given out, but there is a general impression abroad that the mine will shortly be at a better position than hitherto. Yesterday's transactions in the stock reached the respectable total of 10,000 shares at the prices being 3 and 3-1-4.	
Rambler-Cariboo lost a portion of its advance, selling down from 48 1-2 to 45 on the board, and sales being made yesterday off the board at 45. The asking price at the close was 47, while buyers offered 45.	
Centre Star has likewise shown a degree of weakness, the first sale of the week being made at 31-1-2 and the last one at 30-1-4, while bids closed at 30.	
Some attention has been shown in American Boy, which remained steady around 61-2, some fairly large blocks changing hands at that figure.	
Only one transaction was recorded in Homestake, the price being 2 cents, at that stock has practically dropped a point since the closing down of the mine. Cariboo of McKinney sold twice at 25, the last day's quotations being 26 and 24. Black Tail and Morning Glory have been dealt in at practically unchanged prices. One lot of Iron Mask was made at 26, a figure that indicated strength.	
The sales for each day of this week were:	
Thursday	21,000
Friday	23,123
Saturday	23,500
Monday	6,000
Tuesday	13,500
Wednesday	16,000
Total	86,123
