BE CAREFUL

As one travels about these days he is likely to see many people burning up grass or rubbish around their homes. The Brooklyn Eagle declares that it is surprising that so few of these homes are burned up. It says: "In the country, where the fire departments are few and far between this volunteer fireman is a menace. To smother the aromatic odor of burning kalsam on a mild April night, under a full moon generally means that somebody's bonfire has taken to the woods. It happens every year. It is about time that it occurred to everybody that there could be no better time to put an end to the annual waste in forest fires arising from brush fires than now.

"Fall dead grass, last year's leaves, brushwood full of sap and broken branches from the winter's storms make ideal tinder for burning up woodlands. A stanch ally of the burning household is the motorist. With the return of mild weather he fares forth on the Sabbath, flicking lighted cigarette and cigar butts along the highways, building campfires which he neglects to extinguish, scattering a trail of live coals. Needless to say, these little fires of the hills and endanger whole villages. Between the amateur forester of the commuting districts and the careless motorists in the hills it is a wonder that the springtime destruction from open fires is not greater. As it is, it remains an appalling indictment of the most inexcusable brand of carelessness."

Not all motorists are careless, nor all householders. But, too many people give no thought at all to the destruction that is almost sure to result from carelessness in connection with camp fires, burning grass, or lighted cigarettes thrown into the grass along the highways. From this time on let carelessness be the watchword.

FIFTY YEARS FROM NOW

Such amazing developments have marked the past fifty years of world progress that scientific men hesitate to predict the future. Once and awhile, however, one gives flight to his imagination and puts into words some of his visions. The latest to speak along this line is H. W. Corning, president of the Architectural League of New York who suggests that fifty years hence the American metropolis will be a city 75 miles long and 50 miles wide with buildings ris-

ing half a mile in the air. Tubes underground, he thinks, will serve vehicle traffic and pedestrians will be facilitated on their way by movable sidewalks and escalating galleries. This vision of the New York of the future deals only with transportation. The architect may have allowed his fancy to carry him much further and to make other predictions as did a noted British scientist only a few weeks ago. Like the New York architect this British writer, H. Gernsback, editor of Science and Invention, devoted much attention to the transportation problem of the big city. He predicts several levels of streets, with the top one for light passenger vehicles, motor cars, etc. Of course there will be movable sidewalks at varying speeds to accommodate those going short and long distances. One interesting prediction is that the pedestrian, if that is the right word to use, will not walk but will travel on skates driven by electric current taken from the air as radio is now taken. This will permit of getting about at a rate four or five times quicker than walking. Other and more amazing predictions of this man of science are that fifty years hence it will be possible to control the weather, bringing rain or dispersing rain as the necessity predicts. It is also suggested that man's control of high frequency currents will make it possible greatly to stimulate the growth of our crops and plants, producing perhaps ten times as quickly as now. It is also suggested that man himself will be so developed by this vitalizing energy that the child of six will then be the mental and physical equal of today's eighteen year old youth. Of course the vision sees the sun and the wind as the sources of power for light and heat and all the purposes of industry and instead of the waste in electricity which is now very great the loss will be reduced to such a small fraction that man will be utilizing for his many needs, practically all the developed energy of the wind, the sun, the tides and the other forms of nature. Houses will be warm in winter and cool in summer and the comforts of the home and the office will be many times greater than those of today. The telephone user will see, as well as hear, the one with whom he speaks. The radio will not only bring the concert to the home but will enable you to see the singer and watch the theatre while resting in your easy chair in your luxuriant apartment. These are only a few of the many things visioned by those who from their knowledge can speak with a measure of certainty about the future, but the story of the last fifty years suggest that these flights of the imagination are likely to fall far short of the realities. Fifty years ago there were no telephones, no electric lights, no moving pictures, no electric trams, no water navigation and the heavier-than-air flying machines were the impossible dreams of cranky and the suggestion of sending a picture by the recently discovered telegraph would have been laughed at as ridiculous. Today these are realities of our daily life and it would be practically impossible to enumerate the advances made along every line of human endeavor. The next fifty years is certain to bring even more remarkable progress, even if it does not exactly follow the lines indicated by those who now venture to predict.

NEW CARLISLE HONORS CURE FOR LONG SERVICE

New Carlisle, April 27.—A fitting celebration by a large gathering of parishioners marked the twenty-fifth year of a splendid career in the priesthood of Cure Napoleon Dion yesterday at his church at New Carlisle. The edifying service was beautifully decorated by the ladies of Ourvoir, for the occasion, which was a solemn one. Cure Dion, assisted by Abbes F. Plourde and James LeBlanc chanted the grand Mass. Magistrate J. Fabian Burdett had the honor of presenting the cure with the best wishes of the populace of New Carlisle. He spoke of the spirit of friendship and good will which had always existed among the parishioners.

As a priest working in the cause of Christ the Cure had labored with infinite zeal. The magistrate sympathetically referred to the death of the cure's aged mother. Mr. David McKinnon and Mr. Melisac sang sacred songs which were well received.

SETTLEMENT OF WORLD DISPUTES

Washington, April 28.—Secretary of State Kellogg declared himself to be heartily in favor of United States participation in an international tribunal for the settlement of International Law here. Mr. Kellogg asserted it was "strange that though we are approaching 1926 the United States, one of the leading of no higher enterprise than to make the religion which calls itself by his name, more like him."

Stop quarrelling about non-essentials, he urged, and all strive to practice the golden rule and the underlying teachings laid down by the Lord.

George's younger brother, the Duke of Gloucester, in a similar mood of infatuation led lady Wedggrave to the altar; the Duke of Cumberland, another brother, gave his hand to Lady Luttrell.

No less passionate was Augustus eldest brother, George Prince of Wales (later King George IV.) in his devotion to Mrs. Fitzherbert, a pretty widow, to whom he succumbed at first sight of her loveliness, and whom he married in her drawing room one slight compared with the chance of being struck and crippled by a speeding motor. If they are held up by bandits a couple of governments will get busy in their behalf, while if one is stuck up in Chicago one is not only robbed, but often shot in addition, and authorities do little about it. The Roosevelt brethren will be as immune from disease as science can make them, but the Chicago stay-at-home must run the daily risk of contagion as he mingles with unsanitary crowds. Theodore and Kermit may fall off a cliff or be caught in an avalanche but it is not likely; not half as probable as that the Chicago pedestrian will stumble into a coal-hole or be hit by a falling brick as he passes a building under construction.

City life is exciting and risky; one has to be on one's guard whenever one strays abroad. The Asian wilderness is a peaceful sanitarium in comparison.

HAS PRECEDENTS FOR SUCH A CHOICE

Should Prince of Wales Marry Outside of Circle of Royalty.

If the Prince of Wales were to choose for his wife a lady outside the circle of royalty, he will be able to quote many excellent precedents for such a choice, for many of his royal predecessors have found happiness in such unions. In fact, until the Royal Marriage Act put an obstacle in the way of such unorthodox matches, English princes were free to give their hand where their heart could go with them. When for example Edward, the Black Prince sought a wife, he turned his back on the fairest of princesses, to woo the beautiful Joan Wake, a lady who had no drop of royal blood in her veins, and no ancestor more exalted than a baron. But in Joan the prince found happiness such as no more exalted wife could have given him and she also gave him a son to perpetuate the line of kings. Where his eldest brother led the way, John of Gaunt was glad to follow, when he went a-wooing Catherine Swynford, a lady who had no exalted birth to add to her beauty and charm. She bore four children to her romantic lord; and from her was descended Henry IV., who raised the humble Swynford blood to the throne of England.

But the most unconventional of all royal lovers was undoubtedly Henry VIII., who in four of his half dozen marriages decided to wed where he best loved. This he declared when he bestowed his hand upon pretty Anne Boleyn. And though Anne had a city apprentice, Godfrey Boleyn, for grandfather, Henry loved her with a passion no emperor's daughter had ever inspired. And yet in spite of all his passion and pretensions, Anne's beautiful body was scarcely cold before the royal Lothario was vowing love and loyalty to the altar of her successor, Jane Seymour, a lady who had a plain country knight for father, and nothing but a pretty face to commend her to his favor.

And Jane Seymour had two unruly successors in Henry's feckless heart, to both of whom he was devoted, for a time, with equal passion. When James, Duke of York, younger brother of Charles II, decided to take to himself a wife he chose Anne, daughter of Edward Hyde, Earl of Clarendon, and Grand-daughter of a wilderness squire—a young woman of no great birth, and little beauty. From this unruly union came two of England's queens—Mary II, and Anne—to mingle the rustic squire's blood with that of Stuart kings.

Of the heirs of Frederick Prince of Wales, no fewer than three put wedding rings on the fingers of commoners. There is little doubt that George III. made a wife of Hannah Lightfoot, the pretty daughter of a quaker linen draper, on whom he first set eyes as she stood in the doorway of her father's shop as he went to Westminster.

George's younger brother, the Duke of Gloucester, in a similar mood of infatuation led lady Wedggrave to the altar; the Duke of Cumberland, another brother, gave his hand to Lady Luttrell.

No less passionate was Augustus eldest brother, George Prince of Wales (later King George IV.) in his devotion to Mrs. Fitzherbert, a pretty widow, to whom he succumbed at first sight of her loveliness, and whom he married in her drawing room one slight compared with the chance of being struck and crippled by a speeding motor. If they are held up by bandits a couple of governments will get busy in their behalf, while if one is stuck up in Chicago one is not only robbed, but often shot in addition, and authorities do little about it. The Roosevelt brethren will be as immune from disease as science can make them, but the Chicago stay-at-home must run the daily risk of contagion as he mingles with unsanitary crowds. Theodore and Kermit may fall off a cliff or be caught in an avalanche but it is not likely; not half as probable as that the Chicago pedestrian will stumble into a coal-hole or be hit by a falling brick as he passes a building under construction.

City life is exciting and risky; one has to be on one's guard whenever one strays abroad. The Asian wilderness is a peaceful sanitarium in comparison.
