

in the art of drawing that it was his custom to illustrate his varied volumes with his own sketches.

He accumulated a vast fortune by the practice of his profession and this amount was further augmented by his innate frugality. We have much by which to remember Scarpa; and although some of his views are to-day untenable and are superceded by the more modern theories of an advancing science, nevertheless he, by his untiring zeal in investigations, was instrumental in placing anatomy and surgery on the lofty pedestal which they occupy at the present day.
