

The names of corporate authors are entered in descending hierarchical order. Below is an example:

United States. Congress. Library of Congress.
Congressional Research Service.

Under each entry is a list of subject keywords used to describe the contents of each article. These keywords are taken from a Thesaurus of controlled vocabulary, which can be found later in this report. For example:

293. Scheinman, Lawrence. "Nuclear Safeguards and Non-Proliferation in a Changing World Order". SECURITY DIALOGUE. Vol. 23, No. 4, 1992.
SUBJECT KEYWORDS: IAEA; Safeguards; OSI.

Access

The Second Update can be used in a variety of ways. The alphabetical listing of the entries can be used to retrieve documents published by a particular author, private organization, government, governmental agency, or international organization.

If information on a particular topic related to verification is desired, the Subject Index can be used. The keyword Thesaurus preceding the Subject Index explains the keywords used and their interrelationships. In the Index, the numbers ("postings") following each keyword refer to the appropriate entries in the bibliography.

The keyword structure to the subject indexing of the entries in the Second Update has been designed for computer searching using Boolean search strategies. Consequently, when printed in isolation, some keywords may have a large number of postings. A number of keywords have been added and refined as the database was updated: the user should keep this in mind when consulting the Second Update and two previous bibliographies.

When searching for the views of a particular country or countries on verification issues, in addition to checking under the country's name in the alphabetical listing, it may be useful to examine the Subject Index under the relevant subject entry. This will permit commentaries on national positions to be retrieved.
