A NEW SULLIVAN WATER DRILL

Do you need a big, powerful, fast drifting drill to make time in your tunnel or in drifts?

"DX-61" hammer drill meets that need. It's equipped with the Sullivan water jet, and while designed for rapid work in any ground, its fast action and powerful rotation fit it wonderfully for medium to soft or broken rock.

An air cushion at the front end of the cylinder permits backing out with the piston running, without front head damage.
