

erected, the distance between the last sett and the working face must be supported by at least three (3) temporary supports of lagging or props.

16. Where the diameter of round timber is given, sawn timber of equal area may be substituted, or split timber of equal area in the case of prop timber only. In longwall districts either half-round or square-split stringers of equivalent area to a six (6) inch diameter round may be substituted where the latter are not available.
