

# LOUDEN Hay Carriers are dependable

Handle your hay, grain, straw or other feed in the most economical way. Don't get discouraged because the war has robbed you of your best help. Modern Equipment will help you to do alone, the work that previously demanded the services of yourself and two other men.

## Louden Carry-All Sling Carriers

are made for just such rapid work as is necessary in the hay harvest when help is scarce and work abundant. Two lifts and your biggest load is off. Ten inch roller bearing rope wheel makes this the fastest and easiest working carrier made.

Get the new Louden Catalogue that gives you all the information on modern ways of saving money in and around the barn. A postcard will bring it to you. Write Now.

Meadowvale P.O., Streetsville Station

Please mention this paper

occurred in some of the iron which had been ejected from the mass, and had not fully parted with its occluded gases. Considering the action in an ingot cooled simultaneously on all sides, it would appear that the solidified layer at 600 deg. C. is impermeable to gases. As the layer thickens, more and more gas is ejected from the metal and forced inwards. Quick cooling thus bottles up, and concentrates, into local spots and under high pressure, the occluded gases which under slow cooling would have escaped. The diamonds produced are thus under strain.

The striking conclusion finally reached is that diamonds are probably formed at a temperature of about 690 deg. C., or one of the points of recalcence, and that it would seem probable that if a large mass of iron, alloyed with other elements, was submitted to suitable heat treatment, and, after setting, but when still at a temperature at which it is permeable to gas, was subjected to carbon monoxide under pressure, segregations taking place within the mass might result in the production of diamond of payable quantity and size.—From the "Daily Telegraph", London.

## Control of the Tobacco Horn Worm.

The results of two experiments, on the Harrow Tobacco Station, in combatting the tobacco horn worm have shown that spraying with Arsenate of Lead, as soon as the worms appear in appreciable numbers, is a most economical and effective method of eradicating this pest.

By spraying not only are all worms then damaging the tobacco killed but, under most conditions, all which hatch within the next few days after spraying are killed also.

Arsenate of Lead may be used either as a dust or powder or in solution. It has been found up until the tobacco is one half grown a solution consisting of six pounds of dry powdered Arsenate of Lead per hundred gallons of water is most effective, the solution apparently covering the plant more completely and adhering to it longer than the powder. However, after the tobacco becomes larger the middle leaves so nearly cover the bottom leaves as to render the solution and spray cart ineffective. Then the dust gun proves most efficient. For use in the dust gun the dry powdered Arsenate of Lead should be mixed with equal parts of dry sifted wood ashes, or if they are not obtainable the next best carrier is dry air-slacked lime. The powder should be applied early in the morning while the dew is still on the tobacco and when there is no wind blowing; at the rate of five pounds of the Arsenate per acre on large tobacco or three and one-half pounds per acre on small tobacco.

In purchasing the powdered form the buyer should demand Arsenate of Lead having at least 30% Arsenic Oxide; other forms of the poison with smaller Arsenic Oxide content are too slow in their action to give the best results.

If the paste form is used the amounts previously recommended should be doubled as the paste form contains only one half the strength of the powder.

Paris green is also a good insecticide for combatting the worm. However, due to its tendency to burn the tobacco; the fact that it washes off more readily; and the quickness with which it becomes ineffective, as compared with the Arsenate of Lead, the use of the latter is to be preferred.  
D. D. DIGGES,  
Supt. Harrow Tobacco Station.

## Gossip.

James Douglas, of Caledonia, has his recent importation of Leicester landed at home. From all accounts they are a choice lot of 16 shearing ewes. "The North British Agriculturist" has the following to say regarding Mr. Douglas' importation: "They were selected for their good style and breeding, the purity of their color and the cover of their wool. Seven of the shearlings are by the Nisbethill-bred ram, Nisbet Idol, and a number are by Falkland Redoubtable, a son of The Redoubt 4178. The shearlings are of good size and have nicely-cut heads and a good class of wool." Mr. Douglas also has a number of imported rams and shearlings, and a number of home-bred shearlings, which are right good individuals. The imported rams were secured in last fall's importation. Anyone wishing to secure Leicester of high quality should communicate with Mr. Douglas.

# Ride a "C.C.M." Bicycle

This Mark is Your Protection. Every "C.C.M." Bicycle bears this design on the rear upright.

## A NECESSITY on the FARM

YOU need a Bicycle NOW as never before. Help is scarce. Feed for the horse is dear. The most sensible and the cheapest means of getting there and back is a "C.C.M." Bicycle—the best that money can buy. Useful in a thousand ways on the farm. No cost for upkeep.
