QUEBEC SALMON FISHING. The Americans Seems to Monopoliza the Good Fishing Grounds-Some Big Rentals Paid.

Salmon fishermen are at present flocking in large numbers to their Ca-nadian preserves, says The Toronto Sunday World. Robert Goelet of New York and a number of other members of the Restigouche Salmon Club passed through Quebec a few days ago, en route to their main club house at the junction of the Restigouche and Metapedia rivers.

Here the club has spent half a million dollars in acquiring fishing rights and making improvements. Member-ship shares in this club are never long in the market, though the price obtained for them is seldom less than ten or twelve thousand dollars, exclusive of the annual club dues. The Rev. Dr. Rainsford has sold his share, and will not go salmon fishing this year.

Lord Mountstephen's fishing lodge

Lord Mountstephen's fishing lodge and salmon river at Grand Metis have been taken this season by a party of New York men, including John W. Sterling, H. E. Gawtry, Geo. R. Sheldon and J. C. Bloss, who arrived there on June 20. This river, which has been fished by several members of the British Royal family as guests of Lord Mountstephen, contains very large fish and many of them.

and many of them.

Most of the American salmon, clubs in Canada are very exclusive affairs, no only because of the tremendous cost of membership, but also on account of the ballot which must be passed by every purchaser of a club share, and of the stringency of the club rules. Free-dom from the restraints of civilization is not attained by the members of the Restigonche Salmon Club, when the main clubhouse at Metapedia is reach ed, and dressing for dinner is as rigid a rule there as it is at the Waldorf-As-toria.

toria.

No member can even invite a guest to fish with him unless he is the owner of at least two individual shares in the club. Some of the other clubs go still further and refuse members the right to send a friend who is not a member of the or their own membership rights.

to send a friend who is not a member to fish on their own membership rights and shares, when they are unable to go out themselves.

The St. Marguerite Salmon Club, which leases the west branch of the Marguerite River, a tributary of the Saguenay, has Senator Proctor among its members, and when he goes down to the river he takes his secretary with him. Yet the rules of the club respecting the exclusion of non-members are ing the exclusion of non-members ar so strict that the Senator's secretary is so strict that the Senator's sectoary is not permitted to stay in the clubhouse over night, but has to lodge with the guardian of the club. The Senator is a comparatively new member of the club, and another is Dr. Henry van

Dyke.

Mr. Brackett, the fish artist, and A.
W Hooper of Boston are at present
fishing the north branch of the St. Mar-

guerite.

J. J. Hill, the railway magnate, has just gone down on his steam yacht to the distant north shore salmon river, St. John, situated near the coast of he Newfoundland Labrador, for which he pays an annual rental of \$3,000 to the Provincial Government of Quebec. It is a very large stream and contains abundance of salmon. Mr. Hill has recently become also the lessee of the most easterly salmon river of the Promost easterly salmon river of the Pro vince, the St. Paul or Eskimo, for which whice, the St. Paul or Eskino, for which he only pays \$500 a year, parily because of its distance from civilization and also because, although it formerly yielded 50,000 salmon a year to the netters, it has been very badly poached of late by the Indians.

Though many of the Canadian sal-mon rivers have been either partly or wholly rulned in recent years by over-netting and other illegal devices, there are still some streams, such as the Godbout, the Moisie and the Trinity, which yield their ten to twenty fish a day on some occasions to a single rod. Robert E. Plumb of Detroit, ex-president of the Michigan-Peninsula Car Co., is at present fishing the Washicoo-tai, on the north shore of the Gulf of St. Lawrence, for which he pays a rental of \$400 a year. Mr. Boswell of Quebec pays \$2,500 a

year to the Quebec Government for the right to fish the Moisie River, and cannot fish it after all, because the courts have declared that the fishing of the river is not the Government's to lease, but is the property of Ivers W. Adams of Boston, who paid \$30,000 for it to the

riparian owner.

It is valued at \$100,000, and can accommodate ten or a dozen anglers at the same time, besides yielding some of the largest salmon in the country, specimens having been killed out of it exceeding fifty pounds in weight. It is probable that the law suit arising out of the ownership of the river will go to the Imperial Privy Council for final settlement.

Mr. Adams is at present fishing the Moisie himself, accompanied by Messts. Henry Sampson, G. S. Clark of Tefft, Weller & Co. and James Clark, all of New York, who will be followed later by Ivers W. Adams and Henry Sampson, Jr.

by Ivers W. Adams and Henry Sampson, Jr.

To the Washeshoo, which is also the property of Ivers W. Adams, have gone Dr. Watson, W. E. Smith and W. G. Sewall of Boston, and they will be followed by United States Senator Gulkeley of Connecticut and Dr. Heber Bishop of Boston.

The highest rental in Canada for a salmon river is that paid by the Cascapedia Salmon Club for the Cascapedia River, namely, \$8,500 a year, but like the Restigouche and the Moisie, it contains very large fish, not a season passing that some fish of forty pounds are not taken, while some years there are

ing that some fish of forty pounds are not taken, while some years there are salmon of fitty pounds and upward killed on the fly rods of such well-known anglers as Mr. and Mrs. Davis, Mr. and Mrs. W. B. Mershon of Saginaw, Mich., Robert C. Lowry and John G. Heckcher of New York.

Some years, too, the fish are very plentiful in this river. Mr. Davis has a record of thirteen fish in one day. Of course the water was just the right color at the time, the river was full of salmon, and every one of them seemed to try to get the fly quicker than the other one.

OTHER WORLDS.

Our sole knowledge of the people on other worlds and how far the people there differ from our inhabitants, can only be guessed by comparison with animal nature on this small sphere of ours. More important to us is a knowledge of ourselves. to us is a knowledge of ourselves.

"KNOW THYSELF" was an old Greek
thought. How to take care of one's
own body is not so simple as some think;
the human mechanism is a wonderful
thing and requires watching.

the human mechanism is a wonderful thing and requires watching.

One man who has done more to teach the American people how to care for their bodies than almost any other, is Dr. R. V. Pierce, of Buffalo, N. Y., the Author of the "Common Sense Medical Adviser." He says: It is not the quantity of the food eaten which produces strength and health (for some people can keep strong on a very meagre diet), but it is how much food in absorbed and assimilated by the blood and carried to nourish every organ of the body. It is, therefore, vitally necessary for the body that the stomach be in a healthy state. If disease of the stomach, or what is called "stomach trouble." prevents proper nutrition then the heart, liver, lungs, and kidneys do not get proper food—they are not fed on rich red blood, and in consequence, begin to show signs of distress. Outwardly these signs may be pimples and eruptions on skin, pale face, sleepless nights, fired, languid feelings, or, by reason of the nerves not being fed on pure blood, they become starved, and we receive a warning in the pain we call neuralgia. Rheumatism, too, is a blood disease. After years of practice and study Dr. Pierce found that an Alterative Extract, which he named "Dr. Pierce's Golden Medical Discovery," made from the extracts of several plants, invariably produced a tonic effect upon the system. It helped the process of absorption of the healthy elements in the food and increased the red corpuscles of the blood, as well as eliminated the poisons from the system.

Business is business. No time for headaches. Constipation causes them. Doctor Pierce's Pleasant Pellets cure them by curing the cause." Laxative and mild.

Strange Reward For Life Savers.
"I have seen a good many drowning

accidents." said an old sea captain, "and I have seen a good many queer rewards. Once a young man rescued a young widow's little son from the The widow, in her gratitude, asked for the young man's photograph. He sent it to her, and two months later he received a magnificent painting, by Smith, that showed the scene of the rescue accurately, with the little boy and him, both perfect likenesses, struggling like mad in the water.

"A farmer, one of the Pinkertons told me, came from the west to meet a gold brick man. As the farmer and the swindler crossed on the ferry the swindler fell overboard, and the farmer rescued him. He was so grateful that he gave the farmer a brick of solid

silver.
"I saved a pretty girl from drowning in my youth," the captain ended. "She gave me a present that weighed 130 pounds. She gave me herself, and I've still got her. She may not be in as good condition now as she was then, but in my eyes somehow she is as sweet and pretty as she ever was."

Keran and Bible, Concerning the alleged resemblance between Christianity and Mohammed-anism Rev. Napier Malcolm, in "Five Years In a Persian Town," says: There are really not many res blances to note. An officer of Indian troops replied to a Mussulman's suggestion that there were resemblances etween the two religions, "There is hardly a single practical point where Mussulmans and Christians are not entirely at issue, whereupon the Mus-sulman said: 'Sahib, you have read your Bible and have also read the Koran. I always make that remark to Christians. I made it to a padre the other day, and they almost always say: Very true. Mohammedanism has a great deal in common with Christianity." Well, sahib, when they say that, I know that they have not read the Koran and that they have not read their Bibles."

Take my advice dear, and tell him you are not running a storage ware-house for damaged goods.

THE NEWS OF WATERLOO.

How It Was Received Away Up In the Arctic Circle.

The Hudson's Bay factor of the great lone land of the north is a good story-teller. In the far-off places of the earth the power of narrative is given to men who live apart from their fellows, apart from libraries and daily newspapers The long nights of the northern winter foster the story-telling quality in the brains and hearts of a body of men the majority of whom are of the imaginative Celtie race of the Scottish Highlanders, and many of them with a gift of eloquent speech, derived it may be from the Indian strain in their blood.

be from the Indian strain in their blood. When the upright poplar logs are glowing bright in the corner fire-places of the Hudson's Bay Co.'s forts along the Athabasca, Peace and Mackennie Rivers, and pipes are alight, the stories of three centuries of life over haif a continent are given with a sense of reality that the pages of magazines can never give.

can never give.

The anniversary of the battle of Waterloo, last June, recalls a story I heard some years ago in a little fort everlooking the Peace River, which controlled a district larger than a European kingdom, writes Charles Lewis Shaw, in The Globe. It was the story snaw, in The Globe. It was the story of how the news of the success of the allied armies, under the Duke of Wellington, at Waterloo first came to Fort Resolution, at the mouth of the Mackenzie River, on the borders of the Arotic circle, a year and a half after the report of the last shot fired had died away in the ears of the fugitive Emperor of the French, and nearly a year after the proud heart of the Cor-sican conqueror had begun to fret itself in twain at Longwood, his prison house in the Island of St. Helena.

It seemed a stronger, old-world story as it came from the bearded lips of the strong-faced Highland Scotch officer of the Hudson's Bay Co., told in an Eng lish and in a manner free from the ver nacular and tricks of modern expression. Told with the spirit of the illimitable land of silence pervading our every sense, for the spacelessness of everything is the great northand's most impressive influence, it seemed as if the story of Waterloo was but of yesterday, and not a century-old turning point in the history of the world.

"The company's ship," said the Hudson's Bay factor — for to its efficers nacular and tricks of modern expres

son's Bay factor — for to its officers there is only one company in this wide, world of corporations and trusts — "had sailed from London early in June, while the fats of Europe was hanging on the result of the meeting between the allies under Wellington and the great Napoleon and his veteran troops in the low countries. The papers and letters received in the scattered forts in the far north of what was then known as Prince Rupert's Land told of the pending event the folson's Bay factor - for to its officers was then known as Frince Ruperts at Land told of the pending event the following winter, and for one long year the officers of the Hudson's Bay Co., the most of them old-countrymen, waited in prolonged anxiety in the silence of the north for news of the re-

The factor in charge of Fort Resolu

tion, near the mouth of the Mackenzie River, was a gentleman called Mac-pherson, a near relative of the chief of his clan, Cluny Macpherson, distin-guished in the Jacobite rising of '45 in Scotland, and for his devoted adherence to the cause of the House of Stuart That adherence had brought ruin to the fortunes of his family, and had extied his father to St. Germains, in France. Politically banned and unfitted, like the majority of Highland gentlemen of the time for the world of conventional majority of Highland gentlemen of the time, for the world of conventional commerce, he was attracted by the promise of the wild, free life of the huntsman and explorer given by the Hudson's Bay Co. to Scottish youths of family, and late in the eighteenth century he entered the company's service as an apprenticed cierk. He followed, with the intense eagerness of the clansman, the formation of the Highland clans by the politic Pitt into regiments for service on behalf of to regiments for service on behalf of the Empire and their prowess in the four corners of the globe during the Napoleonic wars. Letters had told him that many of his kinsmen were in the regiments then facing the great Em-peror of the French in the Nether-lands.

One can only conceive of the thoughts f Chief Factor Macpherson during of Chief Factor Macpherson during that long winter, the succeeding sum-mer, and the first few months of the following winter, as he waited for the plying dog-trains that would bring the message of the fate of country and kinsfolk down the frozen surface of the great Arctic River.

In those early days the ships of the Makeric Park Co. acided from England

In those early days the snips of the Hudson's Bay Co. salled from England early in June to York Factory, on Hud-son Bay, and through them was ob-tained the last communication from the old country by the inland forts of the company scattered throughout the

great frozen north, for a year.

The mails for the different forts were first taken to Fort Garry, now the populous city of Winnipeg, and retained there until the snow had fallen and the river had frozen, to permit of

their transportation by dog-train to their several destinations. The dog-runner of the northern mail packet in those early days was an important personage throughout Rupert's portant personage throughout Rupert's yet told in the northland of their endurance and sense of duty.

One can only try to understand the feelings of the chief factor of Fort Re-

recings of the chief factor of Fort ke-solution as he looked from his ice-cov-ered fort on the high bank of the Mac-kensle up the ice-bound gorge, day af-ter day and night after night, as the northern lights lit up its snowy sur-face during the month of December, 1816, for a sight of the straining dogs,

face during the month of December, 1816, for a sight of the straining dogs, or listened in the quietness of the silence of the white world about him for a sound or the thiking bell of the leader of the dog-train.

The news came, it is said, on one of the shortest days of the year, a few days before Christmas, and as the factor of the Peace River post wound up the story in his deep voice, that hadn't lost the sibliant accent of the Highlands: "The old chief factor ordered that a salvo of victory should be at once fixed from the bastlon of the fortfrom the little brass cannon that had been brought with great "rouble years before to the fort from York Factory. And as the fur-clad clerks and principal hunters, with rum-diluted water in their music-ox horn drinking cups, stood on the bastlon, and the last shot had died away. Macpherson, the son of the satled Jacobite, gave the toast: exiled Jacobite, gave the toast:

Sarsaparilla. Mends shattered nerves. Gives a healthy red to pale cheeks. Puts good flesh on thin children. Takes off pimples, rashes. Ask your doctor to tell you about it. Level, Mass.

Application was made at half a dozen stores before the man could get one ten dollar bill for his roll of ones. "I don't see," said the man's com panion, "why you went to all that trouble. You are going to pay the money right over to your tailor. Why didn't you give him the one dollar

"Because it would make a bad impression," was the reply. "I am broke, but I don't want him to know it. Whenever you get in that fix pay your debts in the largest bills that you can get hold of. It enhances your value in the estimation of tradesmen and paves the way for further credit. A fellow will think a heap more of you if you pay with one five dollar bill than with five ones. A handful of chicken feed indicates that you have had to hustle around pretty lively to get the money and that there isn't much left where that came from. A man who really has money can afford to pay in pennie if he feels like it, but he can keep up his credit only by using large bills."

GET MORE VIM.

If you are tired, nervous, sleepless, headaches and languor, you need have headaches and languor, you need Dr. Hamilton's Pills; they tone the stomach, assist digestion, brace you up at once. Paul Jones Relies.

In the national museum at Washington there are but three relics of John ton there are but three relies of John Paul Jones. These consist of an old flag which flew at the masthead of the Bonhomme Richard, an old flintlock musket and a fierce looking cutlass, both of which were captured from the Serapis when Captain Jones took that battleship in the famous naval engagement in September, 1779. The flag which flew at the masthead of the Bonhomme Richard is an interesting relic of the period. It was originally sixteen feet long. It has twelve white stars in the blue background and four red and four white stripes. During the battle between the Richard and the British frigate Scrapis this flag was worn by the former ship, and it was orne to the British frigate by Captain Jones when he and his crew left the sinking Bonhomme Richard for the Serapis after its surrender.

C. C. RICHARDSON & CO.

Gentlemen,-I have used MINARD'S LINIMENT on my vessel and in my family for years, and for the every day ills and accidents of life I consider it has no equal. I would not start on a voyage without it, if it cost a dollar a bot-

THE BRAIN OF MAN.

Theory That Its Records Once

The brain of mankind has been defined as a kind of phonographic cylinder, which retains impressions made upon it through the medium of the senses, particularly through the eyes and ears. If this be true memory must depend for its intensity or retentive qualities upon the degree of observa-tion with which the record is made. Nor is this all. If memory's record is kept in the shape of indentations upon the folds of brain matter, are they ever entirely effaced? In other words, we ever really forget anything? May it not be that in the inner depths of the brain memory has stored up recollec-tions of things which are never again purposely turned to perhaps, but which instantly spring into being and flash through the mind whenever we hear or see something which recalls them?

There are several well known men tal phenomena which strengthen this theory. We know that memory often brightens during the last moments of life, and there are cases on record where Germans, French, Spaniards and others who, upon falling sick in this country scores of years after having entirely forgotten their native languages, recovered and used them upon their deathbeds. There is a theory that in all such cases the brain folds have relaxed, just as do the muscles and cords of the limbs and body, and that by so doing they expose to the mind's monitor indentations (recollections which were long since folded up and put away as material that could not be of any particular use.

Some people take so much thought for to-morrow that they accumulate to-morrow's wrinkles to-day.
