MANAGER

PORT MOODY, B.C.

CAPACITY: LUMBER—60,000 feet per Day; LATH—30,000; SHINGLES—120,000.

We have the largest dry kiln capacity of any mill in B.C.; also the largest amount of sheds, and these are well stocked with Manitoba lumber. We have seven planers and are prepared to ship promptly. We understand the requirements of Manitoba dealers. Send us for your next car. JAMES MAYHOOD, Salesman.

An Active Stove Trade.

The stove season for 1901 is now nearing a close, as far as the manufacturers are concerned, and to the McClary Co., London, Ont., this has been the crowning year in their experience. Although their manufactures which are among the largest in Canada, have been running their full capacity all year, as well as a good deal of overtime, this company are said to have been forced to cancel thousands of dollars' worth of orders, because they were unable to turn out the goods in time.

This great popularity of McClary's "Famous" stoves and furnaces is not the result of mere accident, or of any sudden caprice on the part of the buying public, but is due to over a dozen years of honest dealing with their customers, up-to-date goods, a level headed use of experience gained, and prices right. During this long period of years the McClary people have, from time to time, brought out many new and improved stoves and furnaces, and have always, with the help of judicious advertising, found a ready market for their new lines.

This year the company have advertised only three lines, viz., the "Famous Active" range; the "Cornwall" steel range; and the "Sunshine" furnace.

The "Famous Active" is their leading cast-iron range. It is one of the handiest, and is equipped with all the latest improvements, including ventilated oven, baking door, and thermometer. Besides these, it has many other strong features, such as clinkerless duplex grates; heavy sectional cast-iron linings, a thick layer of cement between bottom of stove and the oven steel lining, poker hole in fire door, sectional covers, and an exceptionally rich nickel dress.

The "Cornwall" steel range is quite new on the market, and yet its sale and the general satisfaction reported from those in use, already assure its success. This range has a clean, graceful outline, distinctly its own, and its shapely built combined with its rich nickel dress, which contrasts beautifully with the highly polished hammered steel body, make it "Cornwall" a range of which the McClary Co. have just reason to be proud. The "Sunshine" is the furnace which The McClary Manufacturing Co. have been advertising this year, and when it is known that scores of orders for this hot-air heater have had to be cancelled, because the furnaces could not be supplied, some idea of its success and popularity may be formed. The "Sunshine" is made in three sizes—burns coal, coke, or wood, and has every known improvement.

The business done this year by the Winnipeg branch has also greatly exceeded that of any former year.

C. P. R. traffic receipts for the week ending Nov. 1 were \$269,000, for the same week last year \$211,000.

Comment is beginning to be made on the fact that many of the so-called fire-proof safes, which are in use to-day are found to be anything but proof when the testing time comes. The case of the fire in Montreal, head of trade building last winter is instanced as one in which the contents of a number of safes and vaults were badly damaged. Other large fires of more recent date have developed the same fact.

A good deal is being said regarding the possibilities of trade between Canada and South Africa. It is believed that when peace is again restored in that richly endowed but unfortunate country that not only will Canadian foodstuffs find ready sale there, but also manufactured articles of suitable kind. South Africa is a manufacturing country and almost everything used in any ordinary household articles of all kinds, lumber and building materials have to be imported from across the seas.

The United States reciprocity convention recently held in New York was a shade so far as accomplishing anything practical is concerned. A resolution was passed favoring reciprocity of a kind which would not injure any industry in any United States industry, but as each class now enjoying high protection would kick if the thing were practical, but some one at the meeting. The opponents of the system of protection got in some ill-considered speeches, which made the tariff-taxed manufacturers very
