THE TRUE WITNESS AND CATHOLIC CHRONICLE. FEB. 4. 1876.

HOUSE AND GARDENITIMS

是是各种的中心大批产品。

Why HERS LAY AND DON'T LAY CO meted hens do not lay in winter, for the simple reason there is no albumen material in the corn. When wheat is no albumen material. In the wheat is given to them, there is fat, en ough in; it to supply all that is needed for the wolk and albumen enough to make the white, and lime enough to furnish the shell; it does not the seem difficult to understand why corn-fed hens should not lay, as-they do not, and why wheat-fe d hens should lay as they do.

RAPID CURE FOR CATARRH -According to Hamilton, the severest catarrhal cold can be removed in ten hours by a mixture of carbolic acid, 10 drops; tincture of iodine and cl Horoform each 7.5 drops. A few drops of the mixtu re should be heated over a spirit lamp, in a test, tube, the mouth of which should be applied to the nostrils as soon as volatilishould be applied wo, the nostrils as soon as voidtil-zation is effected. The operation should be repeat-ed in about two valuates, when, after the patient sneezes a numb at of times, the troublesome symptoms rapidly di sappear.

REMEDY FOR BEE-STINGS .- I herewith send you my remedy for bee-stings, which I have used for years, and which you can publish for the benefit of the bee compaunity, if upon trial, you find it of any value.—Get a small heavy glass phial, with a ground glass stopper, have it filled with Tincture of Iodir, e. To use. Shake well, then remove stopper applying what adheres to it to the wound, being carcful not to drop any on the clothing, as it leaves a bad stain. Half ounce phial is large enough.

BORAX FOR COLDS .- A writer in the Medical Record cites a number of cases in which borax has proved a most effective remedy in certain cases or forms of colds. He states that in sudden hoarseness or loss of voice in puplic speakers or singers from cold. relief for an hour or so-as if by magic-may often be obtained by slowly dissolving and partially swallowing a lump of borsx the size of a pea, or about three or four grains, held in the mouth for about ten minutes before speaking or singing. This produces profuse secretion of saliva or watering of the mouth and throat, probably restoring the voice or tone to the dried vocal chords just as wetting brings back the missing notes to a flute when it is too dry.

DESTRUCTION OF THE GERMS OF DISEASE.—As the result of a series of experiments on the destruction of low forms of life by heat, Dr. Grace Calver, demonstrates that the germs of disease will withstand a temperature of 300 degrees Fahrenheit. Exposure to such a heat as this injures the fibres of all kinds of cloth so seriously that they are unfit for further use. It is, therefore, evident that the mere agency of heat cannot be depended upon for the destruction of the germs of corpuscles attached to the clothing of persons who have suffered from any contagious disease. The necessity for a change in opinion regarding the power of chlorine gas to accomplish this purpose is urged in a recent report of the New York Board of Health on the disinfection of clothing and rooms that have been exposed to contamination by small-pox. In the report in question, carbolic acid is especially recommended for the disinfection of clothing and bedding, and sulphurous acid gas prepared by burning sulphur for the disinfection of rooms. The latter substance especially seems to have the power of utterly destroving the germs of small-pox, while chlorine frequently fails altogether, or only accomplishes the object in an imperfect manner.

KERPING MILE. - A Massachusetts dairyman says: I think the success and non-success of keeping milk can be accounted for by the direct action of heat and the negative effect of cold, the one in has-tening and the other in retarding the process of decomposition which takes place in all animal matter after the life principle has left it. I think it will keep as wall with the stopper; out as inthe cans part full as full-if the temperature is the same. If by putting the stopper in we can reduce the temperature faster and lower, it is well to put it in ; if by taking it out we can cool the milk faster, take it out. When a can of warm milk is put into cold water, and the air is many degrees warmer than the water; when the temperature of the milk gets below that of the air, if not covered it begins to draw to itself heat fro fore when milk is put into water to cool, the tempersture cannot be reduced as fast or as low when not stopped up as when stopped. On the other hand, if we wish to cool the milk in the air, it will cool much faster uncovered than covered, and therefors keek sweet much longer. The rule is simple: never cover warm milk in the air; always cover in water. I think the quality of the milk better when stopped and cooled in the water, thereby retaining all the volatile oils, than it is when they are allow-

WASHING THE INSIDE OF THE BODY -There is no cavity in the bidy which water is not fitted for if you can get it in properly. Why one of the best things you can do is to wash your blood; and the great folly we commit in going through our lives from childhood to the grave is, that we do not wash our blood as we ought. Infusions of coffee, tea, chocolate or cocoa, or cider or beer, do not wash the blood, because with the fluid so taken in, somethe blood, because with the fluid so taken in, something is carried in also, which befouls and defiles the blood. Just let a man say to himself, "It is Saturday night, I have worked hard all, the week, and Sunday shall be a day of rest to me, I am now going to give my whole system, between this and Monday morning a thorough washing." So he begins to drink, and drinks but little at a time, yet between Saturday night and Monday morning a between Saturday night and Monday morning a between saturday night and Monday morning a healthy man can drink without producing any disturbance a gallon of water. Now let this come into and go through his circulation—through lungs and skin and kidneys and bowds the waste materials are carried out—and when Monday morning comes, if he jumps out of bed and gives his external skin a good washing, the water that he washes in will be foul. Or if he prefers to test that cuesin will be foul. Or if he prefers to test that question even more thorougly, all he has to do is to take a clean sheet, and wetting it in good soft, pure water, he wrapped up in it, and lie from forty-five to sixty minutes, and then have the sheet washed in a tub of water, and it will color the water so it will look dirty. The man has been washed inside, his blood has been washed. When you have washel his blood, tissues, bones, nerve, muscle, sinew, membrane, and every thing in him, he can defy all pestilence for that week. The washing of a per-son's inside is as necessary as the washing of a person's clothes; and yet there are those who are very particular to have their clothes washed with great care, who are not at all particular to wash thomselves.—Laws of Life.

WATERING STOCK IN WINTER.—There is probably no one thing essential to the health and comfort of farm stock in winter which is so generally neglected as that of furnishing a full supply of water. Many a farmer depends entirely upon stream or pond a quarter or a half a mile distant, to which the animals are driven once a day over a frozen slippery path, or through snowdrifts, in order to slake their thirst with a liquid slightly warmer than ice itself. If a herd of cattle could all be thirsty at one time and at the hour most convenient for the farmer to drive them to the pond, this system of watering might answer tolerably well, but unfortunately animals have their individual peculiarities in such matters as well as human beings. No animal can thrive, or gain flesh when suffering from thirst, no matter, how much or how, rich food is given, and when kept upon dry fodder in winter, they are as likely to require water as frequently as in summor. Drinking places should be made easily accessible, or that animals should not be obliged to walk so that animals should not be obliged to walk May 28.

through mud and ice in order to reach them, thereby getting their feet and legs wet and covered with filth to be carried back into the yards or stables.
Animals will frequently suffer thirst rather than wade through a mud hole to get water. Then again the water should be pure and sweet or it will be rejected until the animal is forced by thirst to drink it. Cows in particular sometimes have strange fancies in regard to water, often preferring that from a stagnant pool to the purest and sweetest spring. But as a rule water from a well, spring or cistern is better for stock in winter than that from an open pond or running stream which is trozen over during frosty weather. The water in the latter is usually too cold either to suit their taste, or to be heathful. No rule can be laid down to meet all circumstances in regard to the amount to be given or the number of times animals should be watered per day or week in winter, but we can safely say that each animal will, if permitted, settle this question for itself.

- -- A-TRIUMPH OF MEDICAL-ART.

Yes, a triumph we call it, when medicine can be so "fixed up" as to be pleasant to take and yet accomplish the object intended, Such a medicine is Dr. Pierce's Purgative Pellets, samples of which the writer procured and tested in his own family. The Pellets (little pills are about one-fifth the size of an ordinary pill, made of highly concentrated root and herbal extracts, and sugar-coated.—Frankfort (Ind.) Weekly Crescent.

For Jaundice, Headache, Constipation, Impure Blood, Pain in the Shoulders, Tightness of the Chest, Dizziness, Sour Eructations from the Stomach, Bad taste in the Mouth, Bilious attacks, Pain in region of Kidneys, Internal Fever, Bloated rain in region of Kidneys, Internat Fever, Blatter feeling about Stomach, Rush of Blood to head, and Gloomy Forebodings, take Dr. Pierce's Pleasant Purgative Pellets, or Sugar-Coated, Concentrated Root and Herbal Juice, Anti-bilious Granules—the "Little Giant" Cathartic, or Multum in Parvo Physic. Sold by dealers in medicines.

Whooping Cough is now known to be a purely sympathetic nervous disease, and to readily yield to Fellows' Hypophosphites. The use of this remedy a few days, is sufficient to eradicate the most severe

PALATABLE MEDICINES.—Ayer's Cherry Pectoral is a honeyed drop of relief; his Cathartic Pills glide sugar-shod over the palate, and his Sarsaparilla is a nectar that imparts vigor to life, restores the health and expels disease.—Waterford (Pa.) Advertiser.
