

the evidence of a sudden action of Alcohol on the brain.

IV

LIQUOR AND THE INDIVIDUAL.

25. *What harm does liquor cause to man?*

Liquor ruins the body and troubles the action of the faculties of the soul.

26. *How does liquor ruin the body?*

Alcohol, even taken in moderate doses, causes a general weariness, an uneasiness which is a predisposition to serious maladies, the commonest of which are inflammation of the bowels and of the kidneys, poisoning of the blood, pneumonia or inflammation of the lungs, epilepsy, paralysis, heart disease, consumption and typhoid fever. The lungs and bronchiae are soon saturated with Alcohol.

27. *What are the chief characteristics of a drunkard?*

He cannot resist sickness; he is
