Men's Pajamas: 10 sizes. Breast measures, 32 to 50 inches. Any size, 1s. 3d. or 30 cents.

ANSWERS TO CORRESPONDENTS.

(Continued.)

NAOMI:—If one's hair is naturally too oily and its growth slow, the following application will help keep it dry and at the time stimulate its growth:

Bay rum..... 4 ounces.
Tincture of cantharides..... 2 drachms.

Rub a little into the hair daily. A whitening lotion which is also a tonic is made as follows:

Tincture of camphor..... 1 ounce.
Tincture of benzoin..... 1 ounce.
Cologne water..... 2 ounces.

The whole mixture may be used in the ordinary bath, but a little of it in the water used for the face, neck and hands will soften and whiten the skin wonderfully.

LOUISE S.:—The most popular and generally used bleach at the present time is peroxide of hydrogen, which is simply water strongly charged with oxygen. It is used by all of the professional hair dressers and is said to be perfectly harmless when used with judgment. If it were very strong and used every other day, it would soon blanch the hair and cause it to fall; but the solution sold for the hair especially will not only lighten and brighten the hair but will render it softer and dryer. In using the peroxide wash the head thoroughly in order to remove all grease or oil and put a little carbonate of soda in the rinsing water. Then with a small tooth-brush wet the hair with the peroxide for several successive days, using an ounce at a time, until it shows the tint desired; after this "touch it up" only as its growth compels: for as the hair grows that next the roots will be of a natural color, and, if dark, will produce a very inartistic and unsightly result unless constantly watched and brightened with the peroxide. The change in color in using this bleach is not instantaneous, but usually appears about the third day, consequently it must not be too liberally applied or the shade may be made too light. Peroxide of hydrogen should be kept in a tightly corked bottle well wrapped in blue or brown paper—a bottle with a glass stopper is best—in a dark place, and in this way its freshness may be preserved for a long time. It should be very bright and sparkling in appearance; otherwise the proper amount of hydrogen is lacking and failure will attend its application.

ASTHMA

—The Kola plant proves the panacea for this distressing ailment, which—has baffled medical science for—centuries.

It was Stanley, the African explorer, who discovered the Kola plant on the banks of the Congo River in Africa, and sufferers from Asthma have to thank him for the discovery of a permanent cure. Clark's Kola Compound represents this wonderful medicinal plant in a highly concentrated form. It is a positive cure for asthma, and has been tested in severest cases. Endorsed by eminent physicians everywhere, and borne out by the testimony of the cured ones. Mr. W. R. Hume, of Karloops, B.C., a C.P.R. engineer on the Western Division, was a sufferer from asthma in its worst form for over twelve years. Nothing gave him more than the merest relief until the railway physician prescribed Clark's Kola Compound. He took two bottles and was permanently cured. If you doubt it write him for particulars of his case. Clark's Kola Compound is sold by all druggists. Price two dollars per bottle, three bottles with cure guaranteed, for five dollars. The Griffiths & Macpherson Co., 121 Church Street, Toronto, or Vancouver, B.C.

HAY FEVER

Clark's Kola Compound is guaranteed to cure Hay Fever. All druggists sell it.
