

PRINCE RUPERT'S CLIMATE.

Prince Rupert's climate has been greatly maligned. Instead of being a drawback to the city, the climate is really an asset of no mean proportions. Its mild winters and cool summers are going to be an attraction ere long to world-wide tourists. Imagine a city in the 55th latitude with a mean temperature of $41\frac{1}{2}$ degrees in the month of February, when all the rest of Canada is in the depth of winter. In summer the mean temperature is about sixty. Prince Rupert is one of the few coast cities which seldom has a fog.

Better than any description of a delightful climate is a table of facts taken from the Dominion meteorological reports on the Prince Rupert observations.
