

HINTS FOR PATHMASTERS.

How Roads May Be Made and Kept in Good Repair.

1. Every good road has two essential features:
 - (a) A thoroughly dry foundation.
 - (b) A smooth, hard, waterproof surface covering.
2. The foundation is the natural subsoil, "the dirt road," which must be kept dry by good drainage.
3. The surface covering is generally a coating of gravel or broken stone which should be put on the road in such a way that it will not, in wet weather, be churned up and mixed with the earth beneath. That is, it should form a distinct coating.
 - (a) To accomplish this:
 - (i) The gravel or stone should contain very little sand or clay—it should be clean.
 - (ii) The road must be crowned or rounded in the centre so as to shed the water to the open drains.
 - (iii) Ruts must not be allowed to form as they prevent water passing to the open drains.
 - (iv) The open drains must have a sufficient fall, and free outlet so that the water will not stand in them but will be carried away immediately.
 - (v) The under-drains should be laid wherever the open drains are not sufficient and the ground has a moist or wet appearance, with a tendency to absorb the gravel and rut readily. By this means the foundation is made dry.
 - (b) Do not leave the gravel or stone just as it drops from the wagon but spread it so that travel will at once pass over and consolidate it before the fall rains.
 - (c) Keep the road metal raked or scraped into the wheel or horse tracks until consolidated.
 - (d) Grade and crown the road before putting on gravel or stone.
 - (e) If a grading machine is available, grade the roads which you intend to gravel before the time of statute labor, and use the statute labor as far as possible in drawing gravel.
 - (f) A fair crown for gravel roads on level ground is one inch of rise to each foot of width from the side to the centre.
 - (g) The roads on hills should have a greater crown than on level ground otherwise the water will follow the wheel tracks and create deep ruts, instead of passing to the side drains. One and one half inches to the foot from the side to the centre will be sufficient.
 - (h) Repair old gravel roads which have a hard centre but too little crown and high square shoulders, by cutting off the shoulders, turning the material outward and placing new gravel or stone in the centre. Do not cover the old gravel foundation with the mixture of earth, sod and fine gravel of which the shoulders are composed. The shoulders can be most easily cut off by means of a grading machine.
 - (i) A width of twenty-four feet between ditches will meet most conditions, with the central eight feet gravelled.
 - (j) Wherever water stands on the roadway or by the roadside or wherever the ground remains moist or is swampy in spring and fall, better drainage is needed.
 - (k) Look over the road under your charge after heavy rains and during spring freshets. The work of a few minutes in freeing drains from obstruction or diverting a current of water into a proper channel may become the work of days if neglected.
 - (l) Surface water should be disposed of in small quantities, great accumulations are hard to handle and are destructive. Obtain outlets into natural watercourses as often as possible.
 - (m) Instead of having deep, open ditches to underdrain the road and dry the foundation, use tile.
 - (n) Give culverts a good fall and free outlet so that water will not freeze in them.
 - (o) In taking gravel from the pit, see that precautions are taken to draw only clean material. Do not let the face of the pit be scraped down, mixing clay, sand and turf with good gravel. There is a tendency to draw dirty gravel as it is easiest to handle.
 - (p) Gravel which retains a perpendicular face in the pit in the spring, and shows no trace of slipping is generally fit for use on the road without treatment. Dirty gravel should be screened.
 - (q) Plan and lay out the work before calling out the men.
 - (r) When preparing plans keep the work of succeeding years in view.
 - (s) Call out for each day only such a number of men and teams as can be properly directed.
 - (t) In laying out the work, estimate on a full day's work from each man and see that it is performed. Specify the number of loads of gravel to constitute a day's work. Every wagon box should hold a quarter of a cord.
 - (u) Make all returns clearly, showing who have done their work and who have not.
 - (v) Make early arrangements for having on the ground when required, and in good repair, all implements and tools to be used in the performance of statute labor.
 - (w) Do all work with a view to permanence and durability. — Municipal World.

A SIDE-LIGHT ON HISTORY.
The manipulations of the world's first woman barber soothed the strong man to sleep.
Presently however, he awoke, looked hastily at himself in the large plate-glass mirror, put on his coat and started to go.
"Lellah stopped him.
"Samson she said, that hair-out is 25 cents!
"Samson weakened, and presently the Philistines had him.
Some men are candidates for office because they can't help it—and some because the people can't help it.

That Tired Feeling

What does it mean? As tired in the morning as at night, can't get rested, nervous, sleepless, dull, languid.

It means that the blood is poor. Muscles cannot be elastic and strong, nerves cannot be steady, energy and vigor cannot be felt, when the blood is impure, impoverished without nourishing power.

Hood's Sarsaparilla imparts to the blood the qualities it lacks when that tired feeling troubles you. It makes the blood rich, pure, full of vitality. It cures spring languor and eradicates all foul taints from the blood, thus guarding against future danger from fevers, malaria, and other serious illnesses. Be sure to get.

GOLD FISH RAISING.

In Oldenburg, Germany, is one of the largest goldfish farms. More than a hundred small ponds contain the fish in all stages of growth, the little ones carefully kept from the rapacious big fellows of eight inches, which would be delighted to eat their helpless brethren. In spite of this, the goldfish is a great coward, and a tiny fish with the courage to attack it can frighten it almost to death. That the demand for goldfish is large is shown by the fact that from the fish farms of Oldenburg over 300,000 fish are sent to market every year.

SIAM'S PECULIAR ORDER.

Not long back his Majesty of Siam gave an Italian, for painting one of his wives from a photograph, "the Grand Cross of the Siamese Crown." It is a rather large order. "This cross," said his Majesty, graciously, "will entitle you to marry twelve wives. It is a distinction I seldom confer, so I hope you will make good use of it."

The readers of this paper will be pleased to learn that there is at least one dreaded disease that science has been able to cure in all its stages, and that is Catarrh. Hall's Catarrh Cure is the only positive cure known to the medical profession. It is a constitutional disease, and requires constitutional treatment. Hall's Catarrh Cure is taken internally, acting directly upon the blood and mucous surfaces of the system, thereby destroying the foundation of the disease, and giving the patient strength by building up the constitution and assisting nature in doing its work. The proprietors have so much faith in its curative powers that they offer One Hundred Dollars for any case that it fails to cure. Send for list of testimonials. Address: F. J. SAVED BY A DREAM.

Farmer Oak, setting posts for Page fence, is set upon by another agent with a machine to "make it yourself, just as good," etc., etc., who soon talks him to sleep. He dreams he's back at the World's Fair, almost famished, can't live without a good cup of coffee, quick. Meets stranger with machine. "You buy the green berry, anything cheap, roast carefully, grind in this: perfectly delicious." "Oh yes, of course, you must steep it, and sugar and cream it,—takes a little time, but it's so cheap."

Here the nightmare kicks the agent off the field and brings farmer O. to his senses, and he'll use the Page. Farm styles at from 45 to 65 cents per rod. Sent for illustrated advertising matter,
