Basement barn of Mr. E. B. Brown, Brownsville.

QUEENSTON CONCRETE

Read Mr. Brown's

Brownsville, Jan. 3rd, 1806.

ISAAC USHER & SONS.

GENTLEMEN, —In answer to your enquiry in reference to your Cement, I am glad to say it has proved in every way satisfactory. As you know, my harms were struck by lightning on May roth, 1894, and entirely consumed. I then built a new barn, 30x80 fit, using your Queenston Cement in my concrete walls. The foundations were 2 ft. deep, and z ft. 8 in. in width; then I built on that the walls 7 ft high (the walls were 16 inches thick), set on the centre of foundation, finishing 12 in. thick on top to receive sills 10 in. square (the joins were lad on the top of sills), making walls for my stables 7 ft 10 in in the clear. The outside face of walls were plumb, the inside face of walls were battering 4 in. We used in the foundation and walls 90 harrels of your cement. I superintended the construction of the walls personally. I had in my employ four men. We were ten lays in building the 9 ft. of wall. We commenced to build on the 18th of June, and finished walls on the 28th. We raised the barn on the 6th of July a very heavy frame of hardwood timber, posts, 19 ft. long (hipped roof). On the 18th of July we commenced hauling in hay, and then grain, as fast as we could harvest it, until I had at least 200 tons in the barn. The walls stood this great pressure; there is not the least crack anywhere. I believe I have a good and perfect a wall as it so passible to build, and I am sure it will stand for generations. In October 1 put in my floor all over the barn, all for cattle manure drops, stalls, etc. In this I used 26 barrels of your Cement, and as a comparative test I used one barrel of Portland Cement. The floors have been in daily use over a year, and I have not been able to see any difference between the Queenston Cement and the Portland Cement. The floors have been in daily use over a year, and I have not been able to see any difference between the Queenston Cement and the Portland Cement. The floors have been in daily use over a year, and I have not been able to see any difference between the Quee

plank. No liquid manure is lost, and stables can be kept clean and sweet with less than half the labor with plank floors.

We have this year built another barn of the following dimensions: 32 x 56, 9 ft walls from bottom of foundations, with lighter walls 22 inches thick at ground line and to inches under the sills, which I consider strong enough for any ordinary barn. We used in this structure fifty barrels of your Queenstan Cement: and I am satisfied that when your instructions are carried out, one will have perfect work every time.

Any further information yourselves or your customers may desire I will write cheerfully at any time.

Very truly yours,

E. B. BROWN.

Farmers and others who contemplate building next season, make your plans early; get your supply of gravel and field stone on the ground during the winter, thus saving both time and money, and making your next season's outlay very small indeed.

Send for our Pamphiet containing full instructions, free.
