Drug Reports.

Canada.

The report of trade during holiday times from retail druggists has been very good, many doing much better than expected. The demand for expensive goods has been light, but perfumery and general sundries have sold well. In these hard times people get intensely practical in Christmas gifts, as one druggist reports sales of patent medicines for that purpose.

There are no important changes in prices to note, gum arabics tending higher.

Sulfonal has advanced; no particulars of it yet.

Caffeine still high on account of scarcity.

Tartaric acid easier.

Norway cod-liver oil has again advanced.

The new duty will advance price of salad oils.

Opium continues firm. The demand

is small and stocks reported very large, but the reports of a proposed combination keep the price up.

Linseed Oil.

The situation in linseed oil seems a little stronger. Some of the American crushers who, a couple of weeks ago, were anxious to sell in one or two carload lots at 53 to 54c. have declined bids at those figures for much larger quantities during the past few days. It is claimed that the only reason oil does not advance as a result of the strong statistical position is that the import prices at present will not admit of it. On the other hand, English crushers, having disposed of their surplus stock of seed, have no oil to spare for this market, and, if they had, American consumers would not give it the preference, even at 1 to 2c. below the cost of the domestic product, because of its generally inferior quality and the unsatisfactory methods of packing followed by the English crushers.—*Journal of Commerce*.

A New Surgical Dressing.

Kikusi, a surgeon of Tokio, Japan, has called attention to a novel and what promises to be a very important article of surgical dressing. It is a form of charcoal derived from burning straw in a smouldering fire, or so arranged that the supply of air is insufficient for complete combustion. The little stalks of charcoal thus prepared are said to be highly hygroscopic, and to make a wonderfully cheap and efficient dressing for wounds. It may be applied directly, or enclosed in little linen or cotton bags.—*National Druggist*.

Japanese camphor can now be had in compressed cakes of two-ounce weight.

Quinine and uranium chloride is a yellow, crystalline powder, soluble in water.

Caffeine oxalate is a true salt, occurring as a white crystalline powder, soluble in water and alcohol.
