

Transportation under special precautions as identified above for transportation of Category II and III materials and, in addition, under constant surveillance of escorts and under conditions which assure close communication with appropriate response forces.

CATEGORY III

Category III materials are those which are not classified as Category I or II materials, but which are still considered to be of significant potential for misuse. These materials are transported under special precautions, including the use of escorts and constant surveillance. The following are the special precautions for Category III materials:

- 1. All Category III materials must be transported in sealed containers.
- 2. All Category III materials must be transported in a vehicle that is equipped with a fire extinguisher and a first aid kit.
- 3. All Category III materials must be transported in a vehicle that is equipped with a communication system that allows the driver to contact the appropriate response forces.
- 4. All Category III materials must be transported in a vehicle that is equipped with a tracking system that allows the appropriate response forces to locate the vehicle at all times.
- 5. All Category III materials must be transported in a vehicle that is equipped with a secure communication system that allows the driver to communicate with the appropriate response forces.
- 6. All Category III materials must be transported in a vehicle that is equipped with a secure tracking system that allows the appropriate response forces to locate the vehicle at all times.
- 7. All Category III materials must be transported in a vehicle that is equipped with a secure communication system that allows the driver to communicate with the appropriate response forces.
- 8. All Category III materials must be transported in a vehicle that is equipped with a secure tracking system that allows the appropriate response forces to locate the vehicle at all times.
- 9. All Category III materials must be transported in a vehicle that is equipped with a secure communication system that allows the driver to communicate with the appropriate response forces.
- 10. All Category III materials must be transported in a vehicle that is equipped with a secure tracking system that allows the appropriate response forces to locate the vehicle at all times.
