

16. In order that the high quality of our export wheat be maintained, and in order to discourage as far as possible, the growth of undesirable varieties of wheat, we would urge that one or more seed warehouses be established for the purpose of collecting and distributing seed of approved varieties, and that an experimental flour mill of sufficient size be established in order that experimental work in milling and baking may be conducted on a scale that will give results in line with those obtained in commercial mills.

The Committee would suggest that the cost of construction and equipping these facilities may well be taken from surpluses of revenue over expenditures in the administration of the Grain Act and the revenue from terminal elevator overages in the western inspection division.

17. The Committee recommends that the protein map prepared by Dr. Birchard exhibited to the Committee be printed for distribution and that a similar map be prepared by the research laboratory for distribution as early as possible in each year.

18. This Committee recommends that Inspectors be appointed at all transfer points between the head of the lakes and the seaboard, whose duty it will be to prevent any mixing of wheat so that the quality and condition of grades as fixed by final inspection will be maintained.

19. Your Committee recommends that the said National Research Council and the Board of Grain Commissioners report, as by the said Resolution instructed, to the Minister of Trade and Commerce, and that the said report be made before the next session of Parliament.

A copy of the printed evidence taken by the Committee in respect to the foregoing subject, is appended hereto for the information of the House.

All of which is respectfully submitted.

W. F. KAY,
Chairman.
