THE CANADA BRICK MACHINE.

Patented 1868.

MEDAL and DIPLOMA awarded at the Provincial
Exhibition, Montreal, 1868.

THIS Machine will mould 15,000 Bricks
PER DAY with the attendance of one man to
put in the Clay, one man or smart boy to attend to
the Moulds, three strong boys to wheel off the Bricks
and back them up, and a small boy to sand the
pallets

To make SLOP BRICKS, less attendance than the
above will be required

By an alteration in the relative speed of the pinions
and crown wheel, it will mould

20,000 BRICKS PER DAY.

The Clay can be moulded stiffer than by ordinary
Machines, and the great pressure applied gives more
solidity and strength to the Bricks. They also retain
their shape, and dry much quicker

This Machine is inexpensive and simple, and is
adapted for either steam or horse power

If a stone or other obstruction prevents the Moulds
from moving forward, the Machine will not get out of
order, but regulates itself

Provision is made for giving the pressure required
to soft or for stiff Clay.

The corners are always well and the Bricks
turned out will all be fit for iron

It is undoubtedly the most perfect and suitable
Machine for making Bricks yet introduced into use.

NINE of these Machines worked by steam, and
TWO by horse power can be seen in actual operation
at the Steam Brick Manufacturing Establishment of
the undersigned, head of Falmouth Street, Montreal.

THE CANADA AUTOMATIC BRICK MAKING
MACHINE is manufactured and for sale (with the
right of using it) by the Patentees
