

To Safeguard Children

against infection, the air in school rooms should be free from dust.

STANDARD Floor Dressing

The circulation of germ-laden dust in the class room is a menace to the health of school children.

Tuberculosis bacilli are most frequently introduced into the lungs and respiratory tubes, *clinging to dust particles.*

Sweeping and dusting merely stir up settled dust and re-distribute it, while sweeping with wet sawdust affords but temporary relief.

Standard Floor Dressing lays the dust permanently, holding it until swept up, and also acts as an active germicide.

Standard Floor Dressing is an excellent floor preservative, preventing splintering and cracking, and improving the appearance of the floor.

Applied most easily and economically with Standard Floor Oiler, though ordinary mop or cloth can also be used.
