Tel: (403) 261-4025
Fax: (403) 263-6493

GMA is the leader in development of interactive, geophysical modelling and interpretive applications for personal computers. Since 1982, the user base has expanded to more than 1000 installations with over 230 clients in thirty-six countries, ranging from major and independent oil companies to universities and consultants. This success stems from a product which is powerful, flexible, networkable and user friendly as well as its dedication to ongoing support of its clients.

With active participation of clients, GMA has designed products to suit the needs of the end users. The company is staffed with science professionals actively engaged in all phases of company operation from product development and high quality client support sales and service. Its greatest challenge has resulted in its finest achievement: creating practical software solutions for today's exploration needs. GMA's software modules are designed to augment your system and extend your powers as an earth scientist.

Mr. Phil Conway
General Manager
